

## Manitoba's High School Graduation Rate

Every year, the number of students who graduate from high school are reported to Manitoba Education. To gain an understanding of how many students complete high school in four years, the total number of public and funded independent high school graduates each year is divided by the total Grade 9 enrolment in these schools four years prior to the year of graduation. This is commonly referred to as the graduation rate.

It should be noted that individual students are not tracked. The high school graduation calculation is therefore a proxy method intended to take an approximate measure of the number of students who move from Grade 9 to Grade 12 graduation without interruption. While the difference between the annual rate and 100% will include students who have withdrawn from school, it will also include students who may be continuing in high school, who have left schools to attend a First Nation school or are continuing high school outside the province, among other possibilities.

The provincial high school graduation rate for June 2010 is 82.7%. The rate has increased 1.8 percentage points from June 2009. In general, the graduation rate for Manitoba has been trending upward in recent years. The following tables present the provincial high school graduation rate for public and funded independent schools from June 2001 to June 2010.
