## DIRECTIONS

- Write each solution in the space provided.
- For full marks, your answers must show all pertinent diagrams, calculations, and explanations.
- Your solutions should be neat, organized, and clear.
- Some answers are to be given as decimal values. Rounding too early in your solution may result in an inaccurate final answer for which full marks will not be given.
- Express your answers as exact values or correct to the nearest thousandth ( 3 decimal places) unless instructed otherwise.

No marks will be awarded for work done on this page.

## Terminology Sheet

Some questions may contain directing words such as explain, identify, and justify. These words are defined below.

Describe: Use words to provide the process or to report details of the response.
Determine: Use a mathematical formula, an algebraic equation, or a numerical calculation to solve a problem.

Evaluate: Find the numerical value.
Explain: Use words to provide the cause of or reason for the response, or to render the response more clear and understandable.

Identify/Indicate: Recognize and select the answer by stating or circling it.
Justify: Show reasons for or give facts that support a position by using mathematical computations, words, and/or diagrams.

Sketch the graph: Provide a detailed drawing with key features of the graph that includes a minimum of 2 coordinate points.

Solve: Give a solution for a problem or determine the value(s) of a variable.
State: Give an answer without an explanation or justification.
Verify: Establish the truth of a statement by substitution or comparison.

Avery has 4 adventure books, 5 mystery books, and 1 comic book.
Determine the number of ways he can arrange all of the books on his shelf if each type of book must be grouped together.

Solve the following equation, algebraically, over the interval $[0,2 \pi]$.

$$
5 \cos ^{2} \theta-\cos \theta-\sin ^{2} \theta=0
$$

Given that $-6048 x^{2} y^{5}$ is the sixth term in the expansion of $(3 x-m)^{7}$, determine $m$.

## Question 4 进距

A series of blood tests measures the concentration of a prescribed drug. This concentration decreases according to the formula $A=P e^{r t}$ where:
$A$ is the concentration at time $t$
$P$ is the initial concentration
$r$ is the rate of change
$t$ is the time, in hours, after the first blood test
The initial concentration is 3.8900 units $/ \mathrm{mL}$. Three hours later, the concentration is $1.7505 \mathrm{units} / \mathrm{mL}$.
a) Determine the rate of change, $r$, algebraically.
b) Determine the concentration of the prescribed drug four hours after the initial concentration of 3.8900 units $/ \mathrm{mL}$ was measured. Express the answer correct to 4 decimal places.

Ariane uses the formula $s=\theta r$ to determine the arc length of a circle that has a central angle of $20^{\circ}$ and a radius of 15 cm .

Below is Ariane's work:

$$
\begin{aligned}
& s=\theta r \\
& S=(20)(15) \\
& s=300 \mathrm{~cm}
\end{aligned}
$$

Describe her error.

Using the graphs below, state the solution of the equation $2 x+3=2 \sqrt{-x}-1$.

Solve, algebraically.

$$
\log _{2}(x+3)=5-\log _{2}(x-1)
$$

Explain why the value of $n$ must be greater than or equal to the value of $r$, when using ${ }_{n} C_{r}$.

## Question 9

- reflection in the $x$-axis
- vertical translation 5 units down
- horizontal stretch by a factor of 3
$g(x)=$ $\qquad$

Explain why the graph of $y=\frac{x-1}{x^{2}+x-6}$ has a horizontal asymptote at $y=0$.

Given the graphs of $f(x)$ and $g(x)$, evaluate $g(f(2))$.

$$
\begin{aligned}
& \tan \theta=1 \\

Solve, algebraically.

$$
{ }_{n} C_{3}=3\left({ }_{n} P_{2}\right)
$$

Given the graph of $y=f(x)$, sketch the graph of $y=\sqrt{f(x)}$.
