Examples of Strategies

Grade 10 Essential Mathematics (20S)

S-1

Sample Strategies

Begin adding from the left

46

+ 38

When you do additions using paper and pencil, you usually start from the right and work toward the left.

To do additions in your head, start from the left.

Sample Strategies

Finding compatible numbers

Compatible numbers are pairs of numbers that are easy to add in your head.

The following are examples of compatible numbers:

The sum equals 100

S–3

The sum equals 600

Find the pairs of compatible numbers that add up to 300.

140	85	160	140 + 160
118	217	73	118 + 182 215 + 85 217 + 82
215	182	83	

Find the pairs of compatible numbers that add up to 800.

250	175	567	250 + 550
333	440	467	333 + 467 625 + 175 440 + 360
625	550	360	440 + 300 J

Mental Math Grade 10 Essential Mathematics (20S) S-4 **Sample Strategies** Create your own compatible numbers Sometimes it is easier to do additions in your head by creating your own compatible numbers and adjusting the total. 650 650 + 350 + 25+ 375 1000 + 25Sa 00 1250 + 750 + 38 1250 O 00 2000 + 3+ 753 2003

Sample Strategies

Subtract starting from the left

Here's a technique that works well when doing subtractions that do not require grouping.

To do subtractions in your head, start from the left and think of your answer one part at a time.

Mental Math Grade 10 Essential Mathematics (20S) S-7 **Sample Strategies Balance a subtraction with whole numbers** When you add the same number to the two elements of a subtraction, the difference between the two does not change. By adding to both elements, you balance the subtraction. That makes it easier to find the answer in your head. 76 + 2 = 7876 28 + 2 = 3028 30 = 4Ο 660 \mathcal{O} 660 + 15 = 675185 185 + 15 = 2000 675 - 200 = 475 \bigcirc 00 8

Mental Math Grade 10 Essential Mathematics (20S) S-8 Sample Strategies Balance a subtraction with decimal numbers When you add the same number to the two elements of a subtraction, the difference between the two does not change. Adding to both elements balances the subtraction. That makes it easier to find the answer in your head. 4.32 + 0.05 = 4.37 4.32 1.95 + 0.05 = 21.95 4.37 – 2 = 2.3 23.62 + 0.11 = 23.73 23.62 15.89 + 0.11 = 16 - 15.89 ° 23.73 – 16 = 7.73 Remember that you have to make sure the second element (not the first) becomes a number that is easy to subtract.

Grade 10 Essential Mathematics (20S)

S-13

Sample Strategies

Work with prices

The sale price of items is often a little less than an even number of dollars.

To work with prices in your head, round off to the nearest dollar. Then, do the calculation required by the problem and adjust your answer.

Grade 10 Essential Mathematics (20S)

S-14

Sample Strategies

Check your change

When you buy something, it is important to check that the amount of change returned to you is correct.

There is an easier way than subtracting in your head: **add to the purchase price**.

50¢

EXAMPLE

You buy a CD for \$14.35 with a \$20 bill. How much change should you get back?

Add starting from \$14.35

You buy a watch for \$74.15 with a \$100 bill. How much change should you get back?

Find the time difference

Mental math calculation is useful to find how much time is left before an event.

To find the difference between two given times, add by steps.

If it is 8:27 a.m., how long do you have to wait before lunch at noon?

If it is 9:50 a.m., how much time is there before 8:15 p.m.?
