General Marking Instructions

Please ensure that
• the student booklet number matches the number on the Scoring Sheet
• only a pencil is used to complete the Scoring Sheet
• the final test mark is recorded on the Scoring Sheet
• the Scoring Sheet is complete and a copy has been made for school records

Do not make any marks in the student booklets. Booklets may be selected by Manitoba Education and Training for sample marking.

Once marking is completed, please forward the Scoring Sheets to Manitoba Education and Training using the envelope provided (for more information, see the administration manual).

Marking

Explanations for student errors for selected-response questions have been provided, if applicable.

To receive full marks for a question, a student’s response must be complete and correct. Partial marks may be awarded for an “appropriate strategy” with execution errors. An **appropriate strategy is defined as one that is consistent with the learning outcomes and mathematical processes associated with the question and, if properly executed, would lead to the correct answer.**

Some questions require a form of explanation or justification from students. Explanation or justification can be given through a labelled diagram, in words, by showing mathematical operations for answer verification, or by providing output from a technological tool. For this reason, appropriate flexibility is required when marking student responses.

Errors

Marks are deducted if conceptual or communication errors are committed.

**Conceptual Errors**

As a guiding principle, students should only be penalized once for each error committed in the context of a test question. For example, students may choose an inappropriate strategy for a question, but carry it through correctly and arrive at an incorrect answer. In such cases, students should be penalized for having selected an inappropriate strategy for the task at hand, but should be given credit for having arrived at an answer consistent with their choice of strategy.
Communication Errors

Communication errors are errors that are not related to the concepts and are tracked on the Scoring Sheet in a separate section. There will be a 0.5 mark deduction for each type of communication error committed, regardless of the number of errors committed for that type (see example on next page).

1. **Final Answer**
   - does not include a percent sign
   - does not identify the answer (e.g., TVM solver, Venn diagram)
   - does not use the given contextual variables
   - incorrectly states the final answer

2. **Notation**
   - does not include braces when using set notation
   - does not include a box when using a Venn diagram
   - does not include one of the following in the equation: “y =”, “sin”, “ln”, or “x”, or writes parameters separately from the equation

3. **Transcription/Transposition**
   - makes a transcription error (inaccurate transferring of information)
   - makes a transposition error (changing order of digits)

4. **Whole Units**
   - does not use whole units for materials purchased in design and measurement questions
   - does not use whole units in contextual questions involving discrete data (e.g., people)

5. **Units**
   - does not include the dollar sign for monetary values
   - uses incorrect units of measure
   - does not include the units in the final answer
   - confuses square and cubic units (e.g., cm² instead of cm³, or vice versa)
   - does not include units with labels on a graph

6. **Rounding**
   - rounds incorrectly
   - rounds too soon
   - does not express the answer to the appropriate number of decimal places, including monetary values to two decimal places

When a given response includes multiple types of communication errors, deductions are indicated in the order in which the errors occur in the response. No communication errors are recorded for work that has not been awarded marks. The total deduction may not exceed the marks awarded.
Scoring

The marks allocated to questions are based on the concepts associated with the learning outcomes in the curriculum. For each question, shade in the circle on the Scoring Sheet that represents the mark awarded based on the concepts. A total of these marks will provide the preliminary mark.

The student’s final mark is determined by subtracting the communication errors from the preliminary mark.

Example:
A student has a preliminary mark of 46. The student committed one E1 error (0.5 mark deduction) and three E6 errors (0.5 mark deduction).

\[
\begin{array}{cccccc}
\text{Final Answer} & \text{Notation} & \text{Transcription/Transposition} & \text{Whole Units} & \text{Units} & \text{Rounding} \\
\end{array}
\]

Communication Errors

\[
\text{Preliminary Mark} - \left( \text{Number of error types} \times 0.5 \right) = \text{Final Mark}
\]

\[
46 - (2 \times 0.5) = 45
\]

Irregularities in Provincial Tests

During the administration of provincial tests, supervising teachers may encounter irregularities. Markers may also encounter irregularities during local marking sessions. Appendix B provides examples of such irregularities as well as procedures to follow to report irregularities.

If a Scoring Sheet is marked with “0” and/or “NR” only (e.g., student was present but did not attempt any questions) please document this on the Irregular Test Booklet Report.
Assistance

If any issue arises that cannot be resolved locally during marking, please call Manitoba Education and Training at the earliest opportunity to advise us of the situation and seek assistance if necessary.

You must contact the Assessment Consultant responsible for this project before making any modifications to the marking keys.

Marking Keys

Please note that this *Marking Guide* contains screen captures taken from a TI–84 Plus graphing calculator.
RELATIONS AND FUNCTIONS

Question 1  Total: 3 marks

Learning Outcome: 12A.R.3  Question Type: Constructed/Selected Response

The temperature in an office is controlled by an electronic thermostat. The temperature varies according to the sinusoidal function:

\[ y = 3 \sin (0.26x - 2.88) + 19 \]

where \( y \) represents the temperature in degrees Celsius and \( x \) represents the time in hours past midnight.

a) Determine the temperature in the office at 9 a.m.

\[ \text{(1 mark)} \]

\[ \text{CALC 1: value} \quad x = 9, \quad y = 17.46 \]

\[ y = 3 \sin (0.26(9) - 2.88) + 19 \]

\[ = 17.46 \]

The temperature is 17.46°C.

b) Determine the maximum temperature in the office.

\[ \text{(1 mark)} \]

\[ \text{CALC 4: maximum} \quad (17.118..., \quad 22) \]

\[ y = 22 \]

\[ \text{Maximum} = 19 + 3 \]

\[ = 22 \]

The maximum temperature is 22°C.

c) An employee increased the average temperature of the electronic thermostat by 3°C. Which of the following equations represents the new function?

Select the best answer.

\[ \text{(1 mark)} \]

A) \( y = \sin (0.26x - 2.88) + 19 \)

B) \( y = 3 \sin (0.26x - 2.88) + 16 \)

C) \( y = 3 \sin (0.26x - 2.88) + 22 \)

D) \( y = 3 \sin (0.26x - 5.88) + 19 \)

Marker Note(s):

→ Answers of –1.14°C in (a) and 3°C in (b) are a result of not closing the parentheses when entering the equation. In this case, award mark 2.

Marking Key

</table>
Given the equation $y = 400(0.9)^x$, describe what “400” could represent in a real-life situation.

The initial population of a city.

OR

The initial amount of bacteria in an experiment.

OR

The initial amount of money in an account.

*Other answers are possible.*

**Marking Key**

1 mark for correct answer
Josemaría is standing directly under the centre of a parabolic satellite dish.
- The bottom of the dish is 28 metres above the ground from where she is standing.
- The highest points of the dish are 50 m above the ground.
- The width of the dish is 64 m.

a) Determine a quadratic equation that models the shape of the dish. Show your work. You may use the table below.

\[
y = 0.02x^2 + 28
\]

Other equations are possible.

b) Josemaría walks 20 metres to the right. She notices that a bird has made a nest on the dish directly above where she stands. Using your equation in (a), determine the height of the bird’s nest from the ground.

\[
CALC: \text{value } x = 20, y = 36.59
\]

The height of the bird’s nest is 36.59 metres.

Marker Note(s):
- Regression equations may vary depending on the software used.
- Award mark 3 for a height of 36 m if using the first equation with rounded values and for 32.32 m if using the second equation with rounded values.

a) Create a clearly labelled graph by plotting the given data. Draw a curve of best fit.  

(3 marks)

b) Determine the logarithmic regression equation that models this data.  

(1 mark)  

\[ y = -0.76 + 18.90 \ln x \]
c) Corinne needs 84 large apples to make pies. How much time will it take for her to have enough apples? Show your work.  

(2 marks) 

\[ Y_2 = 84 \]

CALC 5: intersect (88.536..., 84)

\[ x = 88.54 \]

It will take 88.54 days for Corinne to have enough apples.

**Marker Note(s):**
- Regression equations may vary depending on the software used.
- Award mark ③ with an ③ communication error for a correct graph with one incorrect data point.
- Award mark ③ with an ③ communication error if points are plotted but curve of best fit is not drawn.
- Award mark ⑥ for an answer of 89 days.

</table>
A scientific experiment is conducted on a beverage containing aspartame.

- The initial amount of aspartame is 160 mg.
- The amount of aspartame decreases by 50% every 3 days.

a) Determine an exponential equation that models the remaining amount of aspartame as a function of time (in days). Show your work.

\( y = 160(0.79)^x \)

OR

\[ y = 160 \left( \frac{1}{2} \right)^{\frac{x}{3}} \]

b) State the range for this experiment.

\( \{ 0 < y \leq 160 \} \)

OR

\( (0, 160] \)

OR

The remaining amount of aspartame is greater than 0 but less than or equal to 160 mg.

Marker Note(s):
→ Regression equations may vary depending on the software used.

Select the best answer.

A coin is flipped twice.

What is the probability of the coin landing on heads exactly two times?

A) 1  
B) 0.75  
C) 0.50  
D) 0.25
The odds in favour of Danny’s team winning the tournament are 3 : 7.

Determine the probability that Danny’s team does not win the tournament.

\[
\frac{7}{10}
\]

The probability is \(\frac{7}{10}\), 0.7, or 70%.
Using the digits 0 through 9, determine the number of 4-digit codes divisible by 5 that can be created if none of the digits repeat. Assume codes can start with zero. Show your work.

\[ 9 \times 8 \times 7 \times 2 = 1008 \]

\[ \uparrow \]

0 or 5

A total of 1008 codes can be created.

Martha is entering the Hudson Bay Quest sled dog race. She owns 12 dogs and wants to enter a team of 10 dogs.

a) Determine the number of ways she can randomly choose 10 of her dogs to make up a team.

\[
\binom{12}{10} = 66
\]

There are 66 ways.

b) Martha must now put the 10 chosen dogs in their starting positions. She begins by attaching her lead dogs, Niko and Anuk. Determine the number of ways she can randomly attach the remaining dogs.

\[
8! = 40\,320
\]

There are 40 320 ways.
At recess, students randomly pick one marble from a bag to determine teams for a game. Initially, there are 10 orange marbles and 10 blue marbles in the bag.

Maria and Leah hope to be on the blue team. Maria picks her marble first and puts it in her pocket. Leah picks her marble second. What is the probability that they will both pick a blue marble? Show your work.

\[ P(\text{blue, blue}) = \frac{10}{20} \times \frac{9}{19} \]
\[ = \frac{90}{380} \]
\[ = 0.2368 \]

The probability is \( \frac{9}{38} \), 0.24, or 23.68%.

The weather report calls for a 60% probability of snow in northern Manitoba on Tuesday. The flight from Thompson to Flin Flon has a 30% probability of being on time when it is snowing. There is an 85% probability of the flight being on time when it is not snowing.

a) Use a graphic organizer to show all possible outcomes for this situation.

(1 mark)

\[
\begin{array}{c|c|c}
\text{snow (S)} & \text{no snow (NS)} \\
\hline
\text{on time (T)} & \text{ST} & \text{NST} \\
\text{not on time (NT)} & \text{SNT} & \text{NSNT} \\
\end{array}
\]

Other graphic organizers are possible.

b) Determine the probability that the flight on Tuesday will not be on time. Show your work.

(2 marks)

\[
P(\text{not on time}) = 0.60 \times 0.70 + 0.40 \times 0.15
\]
\[
= 0.42 + 0.06
\]
\[
= 0.48
\]

The probability is \(\frac{12}{25}\), 0.48, or 48%.

Marker Note(s):
→ Award mark 1 for a list of all possible outcomes without probability values.

Question 12

Learning Outcome: 12A.P.6

Question Type: Constructed Response

There are 5 jazz dancers and 7 ballet dancers from which 4 dancers are randomly chosen to form a group.

a) Determine the number of ways 4 dancers can be chosen.

\( \binom{12}{4} = 495 \)

There are 495 ways.

b) Determine the probability that 4 jazz dancers will be chosen. Show your work.

\[
\frac{\binom{5}{4} \times \binom{7}{0}}{\binom{12}{4}} = \frac{5}{495} = 0.0101
\]

The probability is \( \frac{1}{99}, 0.01, \) or 1.01%.

c) Determine the probability that at least 1 ballet dancer will be chosen.

\[
P(\text{at least 1 ballet dancer}) = 1 - P(\text{no ballet dancers}) = 1 - 0.0101 = 0.9899
\]

The probability is \( \frac{98}{99}, 0.99, \) or 98.99%.

**Marker Note(s):**

→ Award a maximum of 3 marks if student consistently uses permutations instead of combinations.

**Marking Key**

1. 1 mark for correct answer in (a)
2. 1 mark for appropriate work in (b)
3. 1 mark for consistent answer in (b)
4. 1 mark for consistent answer in (c)
Select the best answer.

The Mathletica company manufactures inflatable exercise balls. If the cost of plastic for the balls is $0.002/cm², which equation could be used to estimate the plastic cost, $C$, of one exercise ball with radius, $r$?

A) $C = 0.002 \times 4\pi r^2$

B) $C = 0.002 \times \frac{4}{3}\pi r^3$

C) $C = \frac{4\pi r^2}{0.002}$

D) $C = \frac{4\pi r^3}{3(0.002)}$
Kami would like to build a circular cement patio with a diameter of 15 feet as shown below. (Diagram is not drawn to scale.)

![Circular patio diagram]

**a)** Cement costs $200.00 per cubic yard, taxes included. Kami has a budget of $600.00 for the patio. Determine how many cubic feet of cement she can buy.

\[ \frac{\$600.00}{\$200.00} = 3 \]  
\[ 3 \text{ yd}^3 \times 27 = 81 \text{ ft}^3 \]

Kami can buy 81 ft\(^3\) of cement.

**b)** What is the maximum height of the patio, in inches, that keeps her within budget? Show your work.

\[ V = \pi r^2 h \]
\[ h = \frac{V}{\pi r^2} \]
\[ = \frac{81 \text{ ft}^3}{\pi (7.5 \text{ ft})^2} \]
\[ = 0.45837 \text{ ft.} \]
\[ 0.45837 \times 12 = 5.5004 \text{ in.} \]

The maximum height of the patio is 5.50 in.

**Marker Note(s):**  
→ Use communication error if final answer in (a) is given in cubic inches or final answer in (b) is given in feet.

**Marking Key**

<p>| | |</p>
<table>

</tbody>
</table>
Thierry wants to build a baseball field by his home. He is going to place gravel, to a depth of 4 inches, in the infield and grass seed on top of the existing soil in the outfield.

(Diagram is not drawn to scale.)

The costs are as follows:

- $1.50 per cubic foot of gravel
- $16.00 per bag of grass seed, covering 6500 square feet

All items must be purchased in whole units and all prices are taxes included.

a) Determine the total cost to build the baseball field. Assume the field is in the shape of a quarter-circle.

(4 marks)

Cost of gravel:

\[
\frac{\pi r^2 h}{4} = \frac{\pi (145)^2}{4} \cdot \frac{4}{12} = \frac{22 017.328.5}{4} = 5504.33 \text{ ft}^3
\]

5505 ft³ × $1.50/ft³ = $8257.50

Cost of grass seed:

\[
\frac{\pi r_1^2 - \pi r_2^2}{4} = \frac{\pi (320)^2 - \pi (145)^2}{4} = 63 911.78 \text{ ft}^2
\]

\[
\frac{63 911.78 \text{ ft}^2}{6500} = 9.83 \text{ bags}
\]

10 bags × $16.00/bag = $160.00

Total cost:

$8257.50 + $160.00 = $8417.50

The total cost is $8417.50.
b) Thierry obtains a loan from the bank to build the field described in (a). If he makes monthly payments of $400.00, how many months will it take to repay the loan at an interest rate of 6.25%, compounded monthly? Show your work.

(2 marks)

\[ N = 22.34683127 \]
\[ I = 6.25 \]
\[ PV = 3417.50 \]
\[ PMT = -400 \]
\[ FV = 0 \]
\[ P/Y = 12 \]
\[ C/Y = 12 \]
\[ PMT:BGN \]

It will take 23 months to repay the loan.

Marker Note(s):
→ Award a maximum of 1 mark in (b) for one incorrect input value; award no marks for two incorrect input values.
→ Award mark \( \circ \) for an answer of 22.35 months.

Salwa bought a new computer system for $6000.00. She anticipates the value of the system to depreciate at a rate of 15% per year.

What will the computer system be worth at the end of 3 years? Show your work.

\[ y = 6000.00 \times (0.85)^3 \]
\[ y = 3684.75 \]

The computer system will be worth $3684.75.

OR

\begin{align*}
6000.00 \times 0.15 &= 900.00 \\
5100.00 \times 0.15 &= 765.00 \\
4335.00 \times 0.15 &= 650.25
\end{align*}
\begin{align*}
6000.00 - 900.00 &= 5100.00 \\
5100.00 - 765.00 &= 4335.00 \\
4335.00 - 650.25 &= 3684.75
\end{align*}

The computer system will be worth $3684.75.
Diego plans to move to Portage la Prairie. He has two housing options:

**Option 1:**
- Buy a house with a monthly mortgage payment of $1063.65.
- Property taxes are $3070.00 per year.

**Option 2:**
- Rent a house for $1250.00 per month.

**a)** What will be the total cost of Option 1 at the end of 25 years? Show your work.

\[
\begin{align*}
\text{Total cost} &= \text{mortgage payments} + \text{property taxes} \\
&= ($1063.65 \times 25) + ($3070.00 \times 25) \\
&= $319\,095.00 + $76\,750.00 \\
&= $395\,845.00
\end{align*}
\]

The total cost will be $395\,845.00.

**b)** How many years will it take for the total cost of renting to equal the total cost of buying the house?

\[
\begin{align*}
\text{Number of years} &= \frac{\text{Total cost}}{\text{Monthly rent}} \\
&= \frac{395\,845.00}{1250.00} \\
&= 26.39
\end{align*}
\]

It will take 26.39 years.

**c)** Explain why Diego might choose to buy the house.

\[
\begin{align*}
\text{He will own the house after 25 years.} \\
\text{OR} \\
\text{He could sell the house.} \\
\text{OR} \\
\text{He will build home equity.}
\end{align*}
\]

*Other answers are possible.*

**Marker Note(s):**
→ Award mark 3 for an answer of 27 years.

Question 20

Learning Outcomes: 12A.FM.1, 12A.FM.2  Question Type: Constructed Response

Donald and Alex have a combined gross monthly income of $5500.00. They want to buy a house in a neighbourhood where the average monthly heating cost is $200.00 and monthly property taxes are $325.00.

a) Calculate the maximum monthly mortgage payment they can afford, based on the gross debt service ratio. Show your work.

\[ \text{GDSR} = \frac{(\text{Monthly mortgage} + \text{property taxes} + \text{heating costs})}{\text{Gross monthly income}} \times 100 \]

\[ 32\% = \frac{\text{Monthly mortgage payment} + \$325.00 + \$200.00}{\$5500.00} \times 100 \]

They can afford a maximum monthly mortgage payment of $1235.00.

b) Based on the maximum monthly mortgage payment in (a), their bank has offered them a 25-year mortgage at an interest rate of 3.50%, compounded semi-annually. If they have saved $20 000.00 for a down payment, what would be the maximum house price they can afford? Show your work.

\[
\begin{align*}
N &= 390 \\
\text{I/Y} &= 1.5 \\
\text{PV} &= -247360.9826 \\
\text{PMT} &= -1235 \\
\text{FV} &= 0 \\
\text{P/Y} &= 12 \\
\text{C/Y} &= 2 \\
\text{Pmt=End Begin} \\
\text{Maximum house price} &= \$247360.98 + \$20000.00 \\
&= \$267360.98
\end{align*}
\]

They can afford a house with a price of $267 360.98.

Marker Note(s):
→ Award a maximum of 2 marks in (b) for one incorrect input value; award a maximum of 1 mark for two or more incorrect input values.

LOGICAL REASONING

Question 21

Learning Outcome: 12A.1.2

Total: 1 mark

Use the following information to answer the question and select the best answer.

Which of the following statements is true?

A) \( n(A \cup B) = 2 \)

B) \( n(A' \cup B') = 4 \)

C) \( n(A' \cap B') = 4 \)

D) \( n(A \cap B) = 9 \)

Student Error

A: \( n(A \cup B) = 9 \)
B: \( n(A' \cup B') = 11 \)
D: \( n(A \cap B) = 2 \)
You are given the following four inequality statements.

I. $\star < \triangle$

II. $\circ \neq \star$

III. $\star > \square$

IV. $\circ < \square$

Draw the four symbols in order from smallest value to largest value.

$$\circ \square \star \triangle$$

Marking Key:

| 1 mark for correct answer |
A technology survey of 50 students found that:

- 30 students use Instagram
- 25 students use Snapchat
- 15 students use Facebook
- 8 students use only Instagram and Snapchat
- 3 students use only Facebook and Instagram
- 4 students use only Facebook and Snapchat
- 6 students use all three apps

a) Draw a Venn diagram to represent this situation.

(3 marks)

b) How many students use Snapchat or Instagram?

(1 mark)

\[ 50 - 2 - 7 = 41 \]

There are 41 students.

OR

\[ 7 + 4 + 6 + 8 + 3 + 13 = 41 \]

There are 41 students.

**Marking Key**

1. 1 mark for correctly placing the number of students using 2 or more apps in (a)
2. 1 mark for consistent number of students using exactly 1 app in (a)
3. 1 mark for consistent number of students using no app in (a)
4. 1 mark for consistent answer in (b)
Use the following pattern to draw the 4th picture.

![Pattern Diagram]

**Marking Key**

| 1 | 1 mark for correct pattern |
Exemplars

Exemplars may contain screen captures taken from software or Internet pages.
Exemplar 1

Question 1

The temperature in an office is controlled by an electronic thermostat. The temperature varies according to the sinusoidal function:

\[ y = 3 \sin (0.26x - 2.88) + 19 \]

where \( y \) represents the temperature in degrees Celsius and \( x \) represents the time in hours past midnight.

(a) Determine the temperature in the office at 9 a.m.

\[ y = 3 \sin (0.26(9) - 2.88) + 19 \]

\[ y = 18.97^\circ C \]

(b) Determine the maximum temperature in the office.

\[ \text{Max } 19 + 3 = 22 \]

1 mark:

\( \boxed{2} \) → 1 mark for consistent answer in (b)

\( \boxed{3} \) → does not include the units in the final answer
Exemplar 2

Question 1  

The temperature in an office is controlled by an electronic thermostat. The temperature varies according to the sinusoidal function:

\[ y = 3 \sin (0.26x - 2.88) + 19 \]

where \( y \) represents the temperature in degrees Celsius and \( x \) represents the time in hours past midnight.

a) Determine the temperature in the office at 9 a.m.  

(1 mark)

\[ x = 9 \quad y = -1.14 \]

b) Determine the maximum temperature in the office.  

(1 mark)

\[ x = -7.63 \quad y = 3 \]

1 mark:

- ② → 1 mark for consistent answer in (b)
- ① → does not identify the answer
- ⑤ → does not include the units in the final answer
Given the equation $y = 400 \times (0.9)^x$, describe what “400” could represent in a real-life situation.

The “400” could be an amount of animals in the present.
Given the equation $y = 400(0.9)^x$, describe what “400” could represent in a real-life situation.

- a decrease in population

0 marks: no criteria met
Josemaría is standing directly under the centre of a parabolic satellite dish.
- The bottom of the dish is 28 metres above the ground from where she is standing.
- The highest points of the dish are 50 m above the ground.
- The width of the dish is 64 m.

a) Determine a quadratic equation that models the shape of the dish. Show your work. You may use the table below.

\[(2 \text{ marks})\]

<table>

c) Corinne needs 84 large apples to make pies. How much time will it take for her to have enough apples? Show your work.

(2 marks)

\[ y_2 = 84 \]

\[ x = 90.4 \]

\[ = 91 \text{ day} \]

\[ \text{2nd trace, intersect} \]

5 marks:

1 → 1 mark for communicating the context of the graph with appropriate title and/or labels in (a)
2 → 1 mark for using an appropriate domain and range (i.e., window settings/grid range) for the context of the question in (a)
3 → 1 mark for correctly plotting the data in (a)
4 → 1 mark for appropriate work in (c)
5 → 1 mark for consistent answer in (c)
A scientific experiment is conducted on a beverage containing aspartame.

- The initial amount of aspartame is 160 mg.
- The amount of aspartame decreases by 50% every 3 days.

a) Determine an exponential equation that models the remaining amount of aspartame as a function of time (in days). Show your work.

\[
\begin{array}{c|c}
L_1 & L_2 \\
\hline
1 & 160 \\
2 & 120 \\
3 & 80 \\
\end{array}
\]

\[y = 230.76(0.707)^x\]

b) State the range for this experiment.

\((0, 230.76]\)
Exemplar 2

Question 5 Total: 3 marks

A scientific experiment is conducted on a beverage containing aspartame.

- The initial amount of aspartame is 160 mg.
- The amount of aspartame decreases by 50% every 3 days.

a) Determine an exponential equation that models the remaining amount of aspartame as a function of time (in days). Show your work.

\[ y = ab^x \]

\[ a = 160 \]
\[ b = 0.50 \]

b) State the range for this experiment.

\([0, 160]\)

1 mark:

1 mark for correct initial value in equation in (a)
Exemplar 1

Question 7

The odds in favour of Danny’s team winning the tournament are 3 : 7.

Determine the probability that Danny’s team does not win the tournament.

\[
\frac{3}{7} + \frac{7}{7+3} = \frac{7}{10}
\]

\[
\frac{3}{10} = 0.3 \times 100 = 30\%
\]

Danny’s team has a 30% chance of losing.

0 marks: no criteria met
The odds in favour of Danny’s team winning the tournament are 3:7.

Determine the probability that Danny’s team does not win the tournament.

\[
\frac{4}{7} = 0.57 \text{ or } 57\%
\]

\[
\frac{7}{10} = 0.7 \text{ or } 70\%
\]

1 mark:
- 1 mark for correct answer
- [ ] does not identify the answer
Exemplar 1

Question 8

Using the digits 0 through 9, determine the number of 4-digit codes divisible by 5 that can be created if none of the digits repeat. Assume codes can start with zero. Show your work.

\[ \frac{8}{2} \cdot \frac{7}{6} \cdot \frac{2}{5} \times 4 \text{ digit codes divisible by 5 must have the last digit to be either 0 or 5} \]

\[ = 672 \]

There are 672 different kinds of codes that are divisible by 5 and have no repeating digits.

1 mark: 

⇒ 1 mark for consistent answer
Exemplar 2

Question 8

Using the digits 0 through 9, determine the number of 4-digit codes divisible by 5 that can be created if none of the digits repeat. Assume codes can start with zero. Show your work.

\[
10 \cdot 9 \cdot 8 \cdot 7 = \frac{10!}{6!} = 5040 \text{ codes}
\]

1 mark:

\[ \rightarrow 1 \text{ mark for consistent answer} \]
Exemplar 1

Question 9  
Total: 2 marks

Martha is entering the Hudson Bay Quest sled dog race. She owns 12 dogs and wants to enter a team of 10 dogs.

a) Determine the number of ways she can randomly choose 10 of her dogs to make up a team.

\[ \binom{12}{10} = 66 \]

b) Martha must now put the 10 chosen dogs in their starting positions. She begins by attaching her lead dogs, Niko and Anuk. Determine the number of ways she can randomly attach the remaining dogs.

\[ 8P_8 \cdot 2P_2 = 80640 \]

1 mark:
\[ 1 \rightarrow 1 \text{ mark for correct answer in (a)} \]
Exemplar 2

Question 9  
Total: 2 marks

Martha is entering the Hudson Bay Quest sled dog race. She owns 12 dogs and wants to enter a team of 10 dogs.

a) Determine the number of ways she can randomly choose 10 of her dogs to make up a team.

\[
\frac{12!}{2!} = 239,500,800
\]

\[\therefore 239,500,800 \text{ ways she can make a team.}\]

b) Martha must now put the 10 chosen dogs in their starting positions. She begins by attaching her lead dogs, Niko and Anuk. Determine the number of ways she can randomly attach the remaining dogs.

\[
\frac{10!}{2!} = 181,4400
\]

\[\therefore 181,4400 \text{ ways to rearrange.}\]
Exemplar 1

Question 10

At recess, students randomly pick one marble from a bag to determine teams for a game. Initially, there are 10 orange marbles and 10 blue marbles in the bag.

Maria and Leah hope to be on the blue team. Maria picks her marble first and puts it in her pocket. Leah picks her marble second. What is the probability that they will both pick a blue marble? Show your work.

\[
\begin{align*}
\text{Leah} & \quad \text{Maria} \\
0 & \quad 0 \\
10 & \quad 9 \\
B & \quad B \\
20 & \quad 20
\end{align*}
\]

\[
\frac{10}{20} \times \frac{9}{20} = 0.225
\]

1 mark: 
\[\Rightarrow 1 \text{ mark for consistent answer}\]
Exemplar 2

Question 10

At recess, students randomly pick one marble from a bag to determine teams for a game. Initially, there are 10 orange marbles and 10 blue marbles in the bag.

Maria and Leah hope to be on the blue team. Maria picks her marble first and puts it in her pocket. Leah picks her marble second. What is the probability that they will both pick a blue marble? Show your work.

\[
\text{Maria} \quad \frac{10}{20} \quad \text{Leah} \quad \frac{9}{19}
\]

\[
\frac{10}{20} \times \frac{9}{19} = \frac{90}{380} = 0.24 \text{ or } 24\%.
\]

2 marks:

① → 1 mark for appropriate work
② → 1 mark for consistent answer
⑧ → does not express the answer to the appropriate number of decimal places
Exemplar 1

**Question 11**

The weather report calls for a 60% probability of snow in northern Manitoba on Tuesday. The flight from Thompson to Flin Flon has a 30% probability of being on time when it is snowing. There is an 85% probability of the flight being on time when it is not snowing.

a) Use a graphic organizer to show all possible outcomes for this situation.

(1 mark)

b) Determine the probability that the flight on Tuesday will not be on time. Show your work.

(2 marks)

\[
\text{if snows = } 0.6 \times 0.7 = 0.42 \text{ or } 42\% \\
\text{not snow = } 0.4 \times 0.15 = 0.06 \text{ or } 6\%
\]

2 marks:

1 → 1 mark for appropriate graphic organizer in (a)
2 → 1 mark for appropriate work in (b)
Exemplar 2

Question 11

The weather report calls for a 60% probability of snow in northern Manitoba on Tuesday. The flight from Thompson to Flin Flon has a 30% probability of being on time when it is snowing. There is an 85% probability of the flight being on time when it is not snowing.

a) Use a graphic organizer to show all possible outcomes for this situation.

(1 mark)

b) Determine the probability that the flight on Tuesday will not be on time. Show your work.

(2 marks)

\[ 0.40 \times 0.15 = 0.06 \]
\[ 0.60 \times 0.30 = 0.18 \]
\[ 0.18 + 0.06 = 0.24 \]

The probability of being late is 0.24

2 marks:
1 → 1 mark for appropriate graphic organizer in (a)
3 → 1 mark for consistent answer in (b)
Exemplar 1

Question 12  Total: 4 marks

There are 5 jazz dancers and 7 ballet dancers from which 4 dancers are randomly chosen to form a group.

a) Determine the number of ways 4 dancers can be chosen.

\( \binom{12}{4} = \frac{11880}{\text{ways}} \) 

(1 mark)

b) Determine the probability that 4 jazz dancers will be chosen. Show your work.

\( \frac{5 \cdot 4}{11880} = 1.01 \% \) chance

(2 marks)

2 marks:

\( \Rightarrow \) 1 mark for appropriate work in (b)

\( \Rightarrow \) 1 mark for consistent answer in (b)

c) Determine the probability that at least 1 ballet dancer will be chosen.

\( \binom{6}{4} + \binom{7}{4} + \binom{8}{4} + \binom{9}{4} + \binom{10}{4} + \binom{11}{4} = \frac{5904}{11880} \) 

(1 mark)

49.70 \%
Exemplar 2

Question 12  Total: 4 marks

There are 5 jazz dancers and 7 ballet dancers from which 4 dancers are randomly chosen to form a group.

a) Determine the number of ways 4 dancers can be chosen.

(1 mark)

\[ 12 \binom{4}{4} = 495 \]

b) Determine the probability that 4 jazz dancers will be chosen. Show your work.

(2 marks)

\[ 5 \binom{4}{4} \cdot 7 \binom{0}{0} = 5 \]

\[ \frac{5}{495} = 1.01\% \]

c) Determine the probability that at least 1 ballet dancer will be chosen.

(1 mark)

\[ 5 \binom{1}{1} \cdot 7 \binom{3}{3} = 175 \]
\[ 5 \binom{2}{2} \cdot 7 \binom{2}{2} = 210 \]
\[ 5 \binom{3}{3} \cdot 7 \binom{1}{1} = 70 \]
\[ 5 \binom{4}{4} \cdot 7 \binom{0}{0} = 5 \]

\[ 175 + 210 + 70 + 5 = \frac{460}{495} = 92.93\% \]

3 marks:

1 → 1 mark for correct answer in (a)
2 → 1 mark for appropriate work in (b)
3 → 1 mark for consistent answer in (b)
Exemplar 1

Question 14

Kami would like to build a circular cement patio with a diameter of 15 feet as shown below. (Diagram is not drawn to scale.)

a) Cement costs $200.00 per cubic yard, taxes included. Kami has a budget of $600.00 for the patio. Determine how many cubic feet of cement she can buy.

(1 mark)

\[ \frac{\text{1 yard}^3}{46656 \text{ in}^3} \]

$200 per 46656 in^3

$600 for 139968 in^3

b) What is the maximum height of the patio, in inches, that keeps her within budget? Show your work.

(2 marks)

\[ \frac{139968}{\pi (90)^2} \text{ in} = 5.5 \text{ in} \]

The max height of the patio she can afford is 5.5 in.

3 marks:

① → 1 mark for correct cement amount, in cubic feet, in (a)
② → 1 mark for appropriate work in (b)
③ → 1 mark for consistent answer, in inches, in (b)

⑤ → uses incorrect units of measure
⑥ → does not express the answer to the appropriate number of decimal places
Exemplar 2

Question 14

Kami would like to build a circular cement patio with a diameter of 15 feet as shown below. (Diagram is not drawn to scale.)

If

- 12 inches cost of $130.8
- $200.00 per cubic yard
- 0.5 ft or \( \frac{6}{12} \) inch = 6.94

a) Cement costs $200.00 per cubic yard, taxes included. Kami has a budget of $600.00 for the patio. Determine how many cubic feet of cement she can buy.

(1 mark)

\[ 81 \text{ ft}^3 \]

b) What is the maximum height of the patio, in inches, that keeps her within budget? Show your work.

(2 marks)

If \( h = 0.46 \text{ ft} \)

\[ \pi (7.5)^2 \cdot 0.46 = 81.29 \text{ ft}^3 \div 3^3 = 3.01 \text{ yd}^3 \times 200/\text{yd}^3 = \$60.2 \]

If \( h = 0.45 \text{ ft} \)

\[ \pi (7.5)^2 \cdot 0.45 = 79.52 \div 3^3 = 2.95 \text{ yd}^3 \times 200/\text{yd}^3 \]

\[ 0.45 \text{ ft} \times 12 = 5.40 \text{ inches} \]

\[ = \$59.0 \]

Therefore, if Kami wants to stay on budget her maximum patio height would be 5.40 inches at a cost of $59.0

2 marks:

1 \( \rightarrow \) 1 mark for correct cement amount, in cubic feet, in (a)

3 \( \rightarrow \) 1 mark for consistent answer, in inches, in (b)
Thierry wants to build a baseball field by his home. He is going to place gravel, to a depth of 4 inches, in the infield and grass seed on top of the existing soil in the outfield. (Diagram is not drawn to scale.)

The costs are as follows:
- $1.50 per cubic foot of gravel
- $16.00 per bag of grass seed, covering 6500 square feet

All items must be purchased in whole units and all prices are taxes included.

a) Determine the total cost to build the baseball field. Assume the field is in the shape of a quarter-circle.

\[ SA = \frac{2\pi \times 320}{4} = 643,398.1755 \text{ ft}^2 \]

\[ SA_{(inner)} = \frac{2\pi \times 145}{4} = 132,103,9711 \text{ ft}^2 \]

\[ SA_{(outer)} = SA - SA_{(inner)} = 511,344,0044 \text{ ft}^2 \]

\[ A_{(inner)} = \pi x 145^2 = 66,051,985 \text{ ft}^3 \]

\[ Grass \ seed \ bags \ needed = \frac{SA_{(outer)}}{6500} = 19.665... \]

\[ \approx 20 \ \text{bags needed} \]

\[ Cost_{infield} = \frac{1}{2} \times 643,398.1755 \times 1.50 = 99,077.98 \]

\[ Cost_{outfield} = 320 \times 16 = 5120 \]

\[ $99,077.98 + 5120 = $104,197.98 \]

Total cost is $99,397.98
Exemplar 1 (continued)

b) Thierry obtains a loan from the bank to build the field described in (a). If he makes monthly payments of $400.00, how many months will it take to repay the loan at an interest rate of 6.25%, compounded monthly? Show your work.

(2 marks)

\[ 99,397.98 \div (400 \times 12) \]

\[ \approx 20.70 \ldots \]

It will take Thierry to repay the loan 20.70 years.

2 marks:

- 1 mark for consistent number of bags of grass seed in (a)
- 1 mark for consistent total cost in (a)
- 0 marks for not using whole units for materials purchased in design and measurement questions
Thierry wants to build a baseball field by his home. He is going to place gravel, to a depth of 4 inches, in the infield and grass seed on top of the existing soil in the outfield. (Diagram is not drawn to scale.)

The costs are as follows:

- $1.50 per cubic foot of gravel
- $16.00 per bag of grass seed, covering 6500 square feet

All items must be purchased in whole units and all prices are taxes included.

a) Determine the total cost to build the baseball field. Assume the field is in the shape of a quarter-circle.

\[
\text{Infield (gravel)} = \frac{\pi r^2 h}{4} = \frac{\pi (145.2)^2 (0.33)}{4} = 5499.29 \text{ ft}^3
\]

\[
\text{Outfield (grass seed)} = \frac{\pi r^2}{4} = \frac{\pi (175)^2}{4} = 24052.82 \text{ ft}^2
\]

\[
\text{Cost:} \quad \frac{1616500 \text{ ft}^2}{6500} = 24052.82 \times 4 \times 16 = 64 \text{ of grass seed}
\]

\[
\frac{5499.29 \times 1.50}{1} = 8173.93 + \frac{64}{8237.93}
\]
Exemplar 2 (continued)

b) Thierry obtains a loan from the bank to build the field described in (a). If he makes monthly payments of $400.00, how many months will it take to repay the loan at an interest rate of 6.25%, compounded monthly? Show your work.

(2 marks)

\[ \begin{align*}
N &= 0 \\
I &= 6.25 \\
PV &= 8,237.93 \\
PMT &= -400 \\
FV &= 0 \\
PLY &= 12 \\
CGY &= 12 \\
END
\end{align*} \]

\[ N = 21.84 \]

Take him about 22 months to repay the loan.

5 marks:

- \( 1 \) mark for correct volume of gravel in cubic feet in (a)
- \( 2 \) mark for consistent number of bags of grass seed in (a)
- \( 1 \) mark for consistent total cost in (a)
- \( 1 \) mark for appropriate work in (b)
- \( 1 \) mark for consistent number of months in (b)
- \( \text{E4} \) does not use whole units for materials purchased in design and measurement questions
- \( \text{E6} \) rounds too soon/rounds incorrectly
Exemplar 1

Question 16 Total: 2 marks

Samira’s financial planner sent her an annual report of the investments in her portfolio. It stated that her $2000.00 stock investment increased in value by 6.00% while her $3000.00 mutual fund investment decreased in value by 8.00%.

<table>
<thead>
<tr>
<th>Type of Investment</th>

<tr>
<td>Total</td>
<td>5000.00</td>
<td>$360</td>
<td>$5,360.00</td>
</tr>
</tbody>
</table>

Calculate the average rate of return of her portfolio. Show your work.

\[
\text{Rate of return} = \frac{360}{5000} \times 100 = 7.2\% 
\]

1 mark:

\[ \text{2} \rightarrow 1 \text{ mark for consistent rate of return} \]
Your grandmother has some money that she would like to invest on your behalf. She would like to know whether you prefer a long-term or a short-term investment.

Explain one advantage for each type of investment.

long-term investments are usually low-risk meaning that you will get your money back, but the rate of return won't be as high as short-term investments which are risky, but one advantage would be that you will get a lot of money back.
Your grandmother has some money that she would like to invest on your behalf. She would like to know whether you prefer a long-term or a short-term investment.

Explain one advantage for each type of investment.

- **Long-term**: Likely higher interest rates, accumulate more money over time.
- **Short-term**: Access to your money sooner.

2 marks:

① → 1 mark for appropriate long-term investment advantage
② → 1 mark for appropriate short-term investment advantage
Salwa bought a new computer system for $6000.00. She anticipates the value of the system to depreciate at a rate of 15% per year.

What will the computer system be worth at the end of 3 years? Show your work.

1 mark:

1 mark for appropriate use of depreciation rate
Salwa bought a new computer system for $6000.00. She anticipates the value of the system to depreciate at a rate of 15% per year.

What will the computer system be worth at the end of 3 years? Show your work.

\[ N = 3 \]
\[ I = -15 \]
\[ PV = 6000 \]
\[ PMT = 0 \]

\[ FV = 3681.75 \]
\[ P/Y = 1 \]
\[ C/Y = 1 \]

\[ 2 \text{ marks:} \]
1. 1 mark for appropriate use of depreciation rate
2. 1 mark for consistent value at the end of 3 years
3. Does not include the dollar sign for monetary values
Exemplar 1

Question 19

Diego plans to move to Portage la Prairie. He has two housing options:

Option 1:
- Buy a house with a monthly mortgage payment of $1063.65.
- Property taxes are $3070.00 per year.

Option 2:
- Rent a house for $1250.00 per month.

a) What will be the total cost of Option 1 at the end of 25 years? Show your work.

(2 marks)

\[
\begin{align*}
1063.65 \times 300 &= 319095 \\
3070.00 \times 25 &= 76750 \\
\text{Total} &= 395845 \\
\text{After 25 yrs}
\end{align*}
\]

b) How many years will it take for the total cost of renting to equal the total cost of buying the house?

(1 mark)

\[
\begin{align*}
1250 \times 12 &= 15000 \\
15000 \times 27 &= 405000 \\
15000 \times 26 &= 390000 \\
\text{So After 26.5 yrs} \end{align*}
\]

So After 26.5 yrs Would Equal as much as he can buy it for

3 marks:

① → 1 mark for appropriate work in (a)
② → 1 mark for consistent answer in (a)
③ → 1 mark for consistent answer in (b)
④ → rounds incorrectly
Exemplar 2

Question 19

Diego plans to move to Portage la Prairie. He has two housing options:

**Option 1:**
- Buy a house with a monthly mortgage payment of $1063.65.
- Property taxes are $3070.00 per year.

**Option 2:**
- Rent a house for $1250.00 per month.

a) What will be the total cost of Option 1 at the end of 25 years? Show your work.

\[
25 \times 3070.00 = \$76750 \\
300 \times 1063.65 = \$319095 \\
\text{Total} = \$395,845.00
\]

b) How many years will it take for the total cost of renting to equal the total cost of buying the house?

\[
395845 \div 1250 = 317 \text{ months} \div 12 = 26.41 \text{ years}
\]

27 years

c) Explain why Diego might choose to buy the house.

It takes less time

3 marks:
1 → 1 mark for appropriate work in (a)
2 → 1 mark for consistent answer in (a)
3 → 1 mark for consistent answer in (b)
Donald and Alex have a combined gross monthly income of $5500.00. They want to buy a house in a neighbourhood where the average monthly heating cost is $200.00 and monthly property taxes are $325.00.

a) Calculate the maximum monthly mortgage payment they can afford, based on the gross debt service ratio. Show your work.

(2 marks)

\[
\text{GDSR} = \frac{\text{monthly mortgage pay} + \text{monthly taxes} + \text{monthly heating costs}}{\text{gross monthly income}}
\]

\[
\frac{1230 + 325 + 200}{5500} = 31.91\%
\]

- Need to be 32% or lower.

\[\checkmark\text{Lower than 32}\]

b) Based on the maximum monthly mortgage payment in (a), their bank has offered them a 25-year mortgage at an interest rate of 3.50%, compounded semi-annually. If they have saved $20 000.00 for a down payment, what would be the maximum house price they can afford? Show your work.

(3 marks)

\[
N = 25 \cdot 12 \\
I/ = 3.50 \\
PV = 20,000 \\
PMT = -1230 \\
FV = 93313.44\text{, 93 can afford.} \\
C/Y = 2 \\
P/Y = 12
\]

1 mark:

\[\checkmark\text{1 mark for consistent answer in (a)}\]
Donald and Alex have a combined gross monthly income of $5500.00. They want to buy a house in a neighbourhood where the average monthly heating cost is $200.00 and monthly property taxes are $325.00.

a) Calculate the maximum monthly mortgage payment they can afford, based on the gross debt service ratio. Show your work.

\( \text{Gross Monthly Income} - \text{Heating Cost} - \text{Property Taxes} = \text{Maximum Mortgage Payment} \)

\( \$5500 - \$200 - \$325 = \$4975 \)

They can pay up to $4975 a month in mortgage on a house.

b) Based on the maximum monthly mortgage payment in (a), their bank has offered them a 25-year mortgage at an interest rate of 3.50%, compounded semi-annually. If they have saved $20 000.00 for a down payment, what would be the maximum house price they can afford? Show your work.

\[ \text{Apps: Finance 1: TVM Solver} \]

\[ N = 25 \times 12 \]
\[ I = 3.5 \]
\[ PV = 0 \rightarrow 996454.16 \]
\[ PMT = -4975 \]
\[ FV = 0 \]
\[ P/Y = 12 \]
\[ C/Y = 2 \]

The maximum house price they can afford would be $996454.16.
You are given the following four inequality statements.

I. $\star < \triangle$
II. $\bigcirc \neq \star$
III. $\star > \Box$
IV. $\bigcirc < \Box$

Draw the four symbols in order from smallest value to largest value.

0 marks: no criteria met
Exemplar 2

Question 22

You are given the following four inequality statements.

I. \( \star < \triangle \)
II. \( \circ \neq \star \)
III. \( \star > \square \)
IV. \( \circ < \square \)

Draw the four symbols in order from smallest value to largest value.

\( \triangle, \star, \square, \circ \)

0 marks:
→ no criteria met
A technology survey of 50 students found that:

- 30 students use Instagram
- 25 students use Snapchat
- 15 students use Facebook
- 8 students use only Instagram and Snapchat
- 3 students use only Facebook and Instagram
- 4 students use only Facebook and Snapchat
- 6 students use all three apps

a) Draw a Venn diagram to represent this situation.

(3 marks)

b) How many students use Snapchat or Instagram?

(1 mark)

\[ 13 + 8 + 3 + 7 \]

2 marks:

1 → 1 mark for correctly placing the number of students using 2 or more apps in (a)
2 → 1 mark for consistent number of students using exactly 1 app in (a)
3 → does not include a box when using a Venn diagram

Appendix B:  
Irregularities in Provincial Tests

A Guide for Local Marking

During the marking of provincial tests, irregularities are occasionally encountered in test booklets. The following list provides examples of irregularities for which an Irregular Test Booklet Report should be completed and sent to the department:

- completely different penmanship in the same test booklet
- incoherent work with correct answers
- notes from a teacher indicating how he or she has assisted a student during test administration
- student offering that he or she received assistance on a question from a teacher
- student submitting work on unauthorized paper
- evidence of cheating or plagiarism
- disturbing or offensive content
- no responses provided by the student (all “NR”) or only incorrect responses (“0”)

Student comments or responses indicating that the student may be at personal risk of being harmed or of harming others are personal safety issues. This type of student response requires an immediate and appropriate follow-up at the school level. In this case, please ensure the department is made aware that follow-up has taken place by completing an Irregular Test Booklet Report.

Except in the case of cheating or plagiarism where the result is a provincial test mark of 0%, it is the responsibility of the division or the school to determine how they will proceed with irregularities. Once an irregularity has been confirmed, the marker prepares an Irregular Test Booklet Report documenting the situation, the people contacted, and the follow-up. The original copy of this report is to be retained by the local jurisdiction and a copy is to be sent to the department along with the test materials.
