Marking Guidelines
Marking Guidelines

Please ensure that
- the student booklet number matches the number on the Scoring Sheet
- only a pencil is used to complete the Scoring Sheet
- the final test mark is recorded on the Scoring Sheet
- the Scoring Sheet is complete and a copy has been made for school records

Please make no marks in the student test booklets. If the booklets have marks in them, the marks need to be removed by departmental staff prior to sample marking should the booklet be selected.

Once marking is completed, please forward the Scoring Sheets to Manitoba Education and Training using the envelope provided (for more information, see the administration manual).

Marking

The recommended procedure for scoring student responses is as follows:

1. Read the Marking Guide.
2. Study the student samples provided and the rationales for the allotted marks.
3. Determine the mark for the student’s response by comparing its features with the Marking Guide descriptions. The descriptions and samples only typify a student’s response to a given question; an exact match is not anticipated.

The marks allocated to questions are based on the concepts associated with the learning outcomes in the curriculum. For each question, shade in the circle on the Scoring Sheet that represents the mark awarded based on the concepts. A total of these marks will provide the preliminary mark.

Errors

Marks are deducted if conceptual or communication errors are committed.

Conceptual Errors

As a guiding principle, students should only be penalized once for each error committed in the context of a test question. For example, students may choose an inappropriate strategy for a question, but carry it through correctly and arrive at an incorrect answer. In such cases, students should be penalized for having selected an inappropriate strategy for the task at hand, but should be given credit for having arrived at an answer consistent with their choice of strategy.
Communication Errors

Errors not conceptually related to the learning outcomes associated with the question are called “Communication Errors” (see Appendix C). These errors result in a 0.5 mark deduction. Each type of error can only be deducted once per test and is tracked in a separate section on the Scoring Sheet.

When a given response includes multiple types of communication errors, deductions are indicated in the order in which the errors occur in the response. No communication errors are recorded for work that has not been awarded marks. The total deduction may not exceed the marks awarded.

The student’s final mark is determined by subtracting the communication errors from the preliminary mark.

Example:

A student has a preliminary mark of 56. The student committed two E1 errors (0.5 mark deduction) and three E6 errors (0.5 mark deduction).

<table>
<thead>
<tr>
<th>COMMUNICATION ERRORS/ERREURS DE COMMUNICATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Shade in the circles below for a maximum total deduction of 3 marks (0.5 mark deduction per error type). Refer to Marking Guide for details</td>
</tr>
<tr>
<td>Noircir les cercles ci-dessous pour une déduction maximale totale de 3 points (déduction de 0,5 point par type d’erreur). Consultez le Guide de Correction pour plus de détails</td>
</tr>
<tr>
<td>E1</td>
</tr>
<tr>
<td>Final Answer/Réponse finale</td>
</tr>
</tbody>
</table>

Test mark / Note au test: 56 – 1 = 55

Marking Guidelines

Table Values

One mark will be awarded to a student that circles the correct value in a given table. In other words, this will be considered the equivalent of the student writing the correct value in the space provided.
**Follow-through errors**

Generally, a student will not be penalized more than once for the same error. A final answer will be deemed to be correct if it follows correctly from an incorrect intermediate step where marks were already lost. In multiple-part questions, if an error was made in Part A, but subsequent parts were completed appropriately based on the incorrect information in Part A, full marks will be awarded in subsequent parts.

Marks for follow-through errors will not be awarded if
- the answer is wrong and there are no part-mark increments available
- the error is conceptual in nature (e.g., the student used the simple Cosine ratio when the question called for the use of the Cosine Law)

**Additional-information errors**

Students can occasionally provide too much information in their answers. When additional information is provided, it must be clearly indicated as such. For example, if a student is asked to calculate a probability, then full marks are awarded for a correct answer even if the odds are also present—provided this additional information is labelled “odds.”

**Irregularities in Provincial Tests**

During the administration of provincial tests, supervising teachers may encounter irregularities. Markers may also encounter irregularities during local marking sessions. The appendix provides examples of such irregularities as well as procedures to follow to report irregularities.

If a *Scoring Sheet* is marked with “0” and/or “NR” only (e.g., student was present but did not attempt any questions) please document this on the *Irregular Test Booklet Report.*

**Assistance**

If any issue arises that cannot be resolved locally during marking, please call Manitoba Education and Training at the earliest opportunity to advise us of the situation and seek assistance if necessary.

You must contact the person responsible for this project before making any modifications to the marking keys.

Question 1

Cia bought a house for $298 500. She made the minimum down payment of 5%.

Calculate the amount of Cia’s down payment.

Answer:

\[0.05 \times 298500 = 14925\]  ← 1 mark
Exemplar 1

\[ 298,500 \times 0.5 = 14,900 \]

Mark: 0 out of 1
Rationale: Incorrect answer

Exemplar 2

\[ \frac{5}{100} \times 298,500 = \frac{298,500 \times 100}{5} \]

Mark: 0 out of 1
Rationale: Incorrect answer (contradictory information is provided)

Exemplar 3

\[ (298,500 \div 100) \times 5 \]

Mark: 1 out of 1
Rationale: Correct answer (1 mark)
E3 (makes a transcription error)
Blair plans to buy a house. He is considering the following 2 similar houses.

<table>
<thead>
<tr>
<th></th>
<th>House A</th>
<th>House B</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Cost</strong></td>
<td>$250 000</td>
<td>$240 000</td>
</tr>
<tr>
<td><strong>Furnace</strong></td>
<td>New furnace (high efficiency)</td>
<td>Used furnace (needs replacing in 5 years at a cost of $10 000)</td>
</tr>
</tbody>
</table>

Justify which house Blair should buy with reference to the heating costs over time.

**Sample answers:**

- Blair should choose House A because even though the house is more expensive, he will save on heating costs in the long term due to the high efficiency furnace.
- Blair should choose House B because even if his monthly heating costs are higher, he will save $10 000 initially and has 5 years to save up for a new furnace.
Exemplar 1

Since the used furnace needs to be replaced in 5 years, we can assume the new furnace will last longer, which could possibly result in having less maintenance costs in the future.

Mark: 0 out of 1
Rationale: Incorrect response (does not reference heating costs)

Exemplar 2

He should go with house A because he will eventually have to replace the furnace. It is also high efficiency so he will save money on hydro.

Mark: 1 out of 1
Rationale: Correct response (1 mark)
Exemplar 3 (1 mark)

With the new furnace, house B ends up being the same price, but if he waits the 5 years to replace it, he will most likely be paying a larger hydro bill until then. So he should go with house A because it ends up being less expensive and he doesn’t have to worry about replacing the furnace.

Mark: 1 out of 1
Rationale: Correct response (1 mark)

Exemplar 4 (1 mark)

Blair should choose House B because if he doesn’t stay in the house very long, the heating costs will not add up to $10,000.

Mark: 1 out of 1
Rationale: Correct response (1 mark)
This page was intentionally left blank.
Mamadou’s house insurance policy has a deductible of $1000. The annual premium is $1500. If no claim is made during the year, he receives a 10% discount on the premium the following year.

Calculate the total amount paid over the 2 year period, before taxes.

<table>
<thead>
<tr>
<th>Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year 1</td>
</tr>
<tr>
<td>Year 2</td>
</tr>
</tbody>
</table>

**Answer:**

Year 1: $1500

Year 2: $1500 – $150 + $1000

= $2350 ← 1 mark

Total cost: $1500 + $2350

= $3850 ← 1 mark

OR

**Answer:**

$2 \times $1500 – $150 + $1000 ← 1 mark for process

= $3850 ← 1 mark
Exemplar 1

(2 marks)

Mark: 0 out of 2
Rationale: Incorrect Year 2 amount
Incorrect total cost (does not add Year 1)

Exemplar 2

(2 marks)

<table>
<thead>
<tr>
<th>Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year 1</td>
</tr>
<tr>
<td>Year 2</td>
</tr>
</tbody>
</table>

$1500 + $1350 = $2850

Mark: 1 out of 2
Rationale: Incorrect Year 2 (does not add deductible)
Correct total cost (follow-through error) (1 mark)
Exemplar 3

(2 marks)

Year 1 = $1500.00 - Premium
Year 2 = $1350.00 - Premium
Year 2 = $1000.00 - Deductible

$38,500.00

Mark: 2 out of 2
Rationale: Correct Year 2 amount (1 mark)
Correct total cost (1 mark)
This page was intentionally left blank.
A property has a portioned assessment of $198 000. The municipal tax rate is 18.2 mills. Education taxes are $1960. The property has a frontage of 45 feet. There is a local improvement levy of $9.42 per foot for lane paving.

Calculate the total taxes due if the provincial tax credit is $700.

**Answer:**

Municipal tax: \[
\frac{18.2}{1000} \times 198\,000 = 3603.60
\] ← 1 mark

Local improvements: \[
45 \times 9.42 = 423.90
\] ← 1 mark

Education tax: $1960

Total tax: \[
3603.60 + 423.90 + 1960 - 700 = 5287.50
\] ← 1 mark
Exemplar 1

(3 marks)

Mark: 1 out of 3
Rationale: Incorrect municipal tax
Correct local improvement (1 mark)
Incorrect total tax (does not add local improvements)

Exemplar 2

(3 marks)

Mark: 1 out of 3
Rationale: Incorrect municipal tax
Correct local improvement (1 mark)
Incorrect total tax (does not deduct tax credit)
Exemplar 3

(3 marks)

\[ \text{TTT} = \left(18.2 \text{ mills} \times \frac{198 \, 000}{1000}\right) + \$423.90 - 700 \]

\[ = 360.36 + (-276.10) \]

\[ = \$3327.50 \]

Mark: 2 out of 3
Rationale: Correct municipal tax (1 mark)
Correct local improvement (1 mark)
Incorrect total tax (does not include education tax)
This page was intentionally left blank.
Explain why a bank usually limits the Gross Debt Service Ratio (GDSR) to 32% when determining if a homebuyer will be approved for a mortgage.

**Sample answers:**

- If you spend more than 32% of your income on financing your home, you may not have enough money for other expenses.
- 32% has been statistically shown to allow for a comfortable financial situation.
Exemplar 1

If the buyer is using more than 32% of their income than they aren’t suitable for a mortgage.

Mark: 0 out of 1
Rationale: Insufficient response

Exemplar 2

The bank would use the 32% to determine because they don’t want to give someone a loan if they won’t be able to pay it back.

Mark: 1 out of 1
Rationale: Correct response (1 mark)

Exemplar 3

The bank is investing in you if they approve your mortgage. People who are above the 32% threshold are considered “house poor” and are a larger liability to the bank.

Mark: 1 out of 1
Rationale: Correct response (1 mark)
Darcy and Marco have qualified for a $300 000 mortgage with two payment options. Option 1 is a 4.5% loan for 25 years with a monthly rate of $5.50 per thousand borrowed. Option 2 is a 6.5% loan for 20 years during which they would have paid a total of $482 400.

A) Calculate the monthly mortgage payment for Option 1. (1 mark)

**Answer:**

Monthly mortgage payment: 
\[
\frac{5.50 \times 300 000}{1000} = \frac{1650}{1} \quad \text{← 1 mark}
\]

B) Calculate the total amount paid over the 25 years in Option 1. (1 mark)

**Answer:**

Total amount paid: 
\[
1650 \times 12 \times 25 = 495 000 \quad \text{← 1 mark}
\]

C) Justify why Darcy and Marco might choose Option 1 instead of Option 2. (1 mark)

**Sample Answers:**

- Although Option 1 is more expensive in the long run, it is more affordable as a monthly payment.
- \[
\frac{482 400}{12 \times 20} = \frac{2010}{1} \quad \text{$/month. Since$1 650 is less than$2010, they should choose Option 1.}\]
Exemplar 1

(3 marks)

A) \[ \frac{5.50}{300.000} = 183.33 \text{, monthly} \]

B) \[ 458.325 \]

C) The payments would be lower in option 1 than 2.

Mark: 1 out of 3
Rationale: Incorrect answer in Part A
Incorrect answer in Part B
Correct response in Part C (1 mark)

Exemplar 2

(3 marks)

A) 
\[
\begin{align*}
300,000 \times 4.5\% \times 25 &= 337,500 \\
337,500 \times 5.50 &= 183.3325 \\
\frac{183.325}{1000} &= 183.33 \\
\frac{337,500}{183.325} &= 18374.25 \\
\frac{18374.25}{12} &= 1531.19 \\
\text{monthly payment} &= 1131.19
\end{align*}
\]

B) \[ 1131.19 \times 12 \times 25 = 339,357.00 \]

C) Option one would be the option to choose because the amount paid back is lower than option two.

Mark: 2 out of 3
Rationale: Incorrect answer in Part A
Correct answer in Part B (follow-through error) (1 mark)
Correct response in Part C (follow-through error) (1 mark)
Exemplar 3 (3 marks)

A) \[ \frac{300,000 \times 5.50}{1000} = \$1650.00 \]

\[ = 1650 \times 12 \times 25 \]

\[ = \$495,000.00 \]

E1

B) \[ 1650 \times 12 \times 25 = \$495,000.00 \]

C) Lower payments due to more time to pay the mortgage

Mark: 3 out of 3

Rationale: Correct answer in Part A (1 mark)
E1 (too much information is presented in the answer and the information is numerically and conceptually correct)
Correct answer in Part B (1 mark)
Correct response in Part C (1 mark)
This page was intentionally left blank.
Preventative home maintenance can help a homeowner avoid expensive emergency repairs.

Describe 1 preventative maintenance task that you can do to ensure the roof of your house remains in good condition.

Sample answers:
- remove snow
- clean gutters
- remove branches/leaves
- fix damaged shingles
Exemplar 1

Mark: 0 out of 1
Rationale: Incorrect response

Probability

Question 8 E6.P.1

Given the following spinner:

A) State the probability, in fraction form, of the spinner landing on 4. (1 mark)

Answer:

\[
\frac{1}{8}
\]

Note to marker: Accept equivalent fractions.

B) State the probability, as a percent, of the spinner landing on a number less than 4. (1 mark)

Answer:

50%
Exemplar 1

(2 marks)

A) \( \frac{1}{2} \)

B) \( 0.5\% \)

Mark: 1 out of 2
Rationale: Correct answer in Part A (1 mark)
Incorrect answer in Part B

Exemplar 2

(2 marks)

A) \( P_{(4)} = \frac{1}{8} \)

B) \( P = \frac{4}{8} \)
   \[ = 0.5 \]
   \[ = 50\% \]

Mark: 2 out of 2
Rationale: Correct answer in Part A (1 mark)
Correct answer in Part B (1 mark)
A company states that the theoretical probability of manufacturing a defective calculator is 1.3%. Natalie samples 200 calculators and finds that 4% of them are defective. She immediately takes a second sample of 1000 calculators and finds that 1.8% of them are defective.

<table>
<thead>
<tr>
<th>Natalie’s Results</th>
<th>Sample Size</th>
<th>Percent Defective</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sample 1</td>
<td>200</td>
<td>4%</td>
</tr>
<tr>
<td>Sample 2</td>
<td>1000</td>
<td>1.8%</td>
</tr>
</tbody>
</table>

Explain why her second sample is closer to the theoretical probability than her first.

**Answer:**

The larger sample should be closer to the theoretical probability.
Because she tested more so she has more variables.

Mark: 0 out of 1
Rationale: Incorrect response

Mark: 1 out of 1
Rationale: Correct response (1 mark)

Mark: 1 out of 1
Rationale: Correct response (1 mark)
The probability of being selected as a jury member is 0.07.

Calculate the probability, in decimal form, of \textbf{not} being selected.

\textbf{Answer:}

\begin{align*}
1 - 0.07 &= 0.93 \\
&\quad \rightarrow 1 \text{ mark}
\end{align*}
**Exemplar 1**

(1 mark)

\[ 100 - 0.07 = 99.93 \]

Mark: 0 out of 1  
Rationale: Incorrect answer

**Exemplar 2**

(1 mark)

\[ P\text{ (in favor)} = \frac{7}{100} \text{ or } 0.07 \]

\[ P\text{ (against)} = \frac{93}{100} \text{ or } 0.93 \]

Not becoming a jury member: 0.93

Mark: 1 out of 1  
Rationale: Correct answer (1 mark)
State the odds against a soccer game ending in a tie score if the probability of a tie is $\frac{9}{225}$.

Answer:

216 : 9  or  216 to 9
Exemplar 1

Mark: 1 out of 1
Rationale: Correct answer (1 mark)
The probability of having green eyes is 3 out of 25.

Calculate the expected number of people who have green eyes in a group of 150 people.

**Answer:**

\[
P(\text{green}) = \frac{3}{25}(150)
\]

\[
= 18 \text{ people} \quad \leftarrow 1 \text{ mark}
\]
Exemplar 1

\[ \frac{3}{25} \times \frac{25}{150} \]

\[ = 25x = 150 \times 30 \]

\[ = \frac{4}{25} \]

\[ = 18 \]

\[ = \frac{18}{150} \]

Mark: 1 out of 1
Rationale: Correct answer (1 mark)
E4 (does not use whole units in contextual questions using discrete data)

Exemplar 2

Mark: 1 out of 1
Rationale: Correct answer (1 mark)
E1 (too much information is presented in the answer)
“Pick the Marble” is a game that involves picking one marble out of a bag. In the bag, 32% of the marbles are red, 4% are green, and 64% are blue. It costs $2 to play, and the prizes are listed in the table below.

<table>
<thead>
<tr>
<th>Colour</th>
<th>Probability of Winning</th>
<th>Prizes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Red</td>
<td>32%</td>
<td>Stuffed animal valued at $10</td>
</tr>
<tr>
<td>Green</td>
<td>4%</td>
<td>Stuffed animal valued at $15</td>
</tr>
<tr>
<td>Blue</td>
<td>64%</td>
<td>Nothing</td>
</tr>
</tbody>
</table>

Calculate the expected value for the game.

**Answer:**

\[
EV = P(\text{win}) \times \text{gain} + P(\text{win}) \times \text{gain} - P(\text{lose}) \times \text{loss}
\]

\[
= 0.32(8) + 0.04(13) - 0.64(2)\]

No mark for 1 or 2 correct substitutions

1 mark for 3, 4, or 5 correct substitutions

2 marks for all correct substitutions

\[
= 2.56 + 0.52 - 1.28
\]

\[
= 1.80
\]

← 1 mark

**OR**

**Answer:**

Average winnings: \(0.32(10) + 0.04(15) + 0.64(0)\)

\[
= 3.20 + 0.60 + 0
\]

\[
= 3.80
\]

← 1 mark for process

Expected value: $3.80 – $2

\[
= 1.80
\]

← 1 mark
**Exemplar 1**

(3 marks)

\[(3 \times 10) + (4 \times 15) + (64 \times 0)\]

\[\downarrow\]

\[320 + 60 + 0\]

\[EV = 380\]

Mark: 1 out of 3

Rationale: Incorrect process
- Correct average winnings (follow-through error) (1 mark)
- Incorrect expected value

**Exemplar 2**

(3 marks)

\[EV = \frac{cost}{cost} + \frac{Win}{Win} + \frac{P}{P} + \frac{P(x)}{P(x)}\]

<table>
<thead>
<tr>
<th></th>
<th>Red</th>
<th>Green</th>
<th>Blue</th>

1.8
\]

Mark: 3 out of 3  
Rationale: Correct process (1 mark)  
Correct average winnings (1 mark)  
Correct expected value (1 mark)  
E5 (does not include units in final answer)  
E6 (does not express the answer to the appropriate number of decimal places)
Question 14

Each letter of the word M U L T I P L I C A T I O N is written on a different card. The cards are shuffled and placed face down on a table. One card is selected and then replaced.

A) State the probability of selecting a card with the letter L or P. (1 mark)

Answer:

\[
\frac{3}{14} \text{ or } 0.21 \text{ or } 21.43\% \text{ or three out of fourteen}
\]

Note to marker: Accept equivalent representations.

B) State the odds in favour of selecting a card with the letter A. (1 mark)

Answer:

1 : 13 or 1 to 13

Notes to marker: Accept equivalent representations.

Even though students are encouraged to express odds in the form “for : against”, award 1 mark for odds expressed in the form “against : for”.

C) State the odds against selecting a card with a vowel (A, E, I, O, U). (1 mark)

Answer:

8 : 6 or 8 to 6

Notes to marker: Accept equivalent representations.

Even though students are encouraged to express odds in the form “against : for”, award 1 mark for odds expressed in the form “for : against”.

Exemplar 1

(3 marks)

A) \( \frac{3}{14} \)

Rationale: Incorrect pre-tax value  
Correct final answer (follow-through error) (1 mark)

Exemplar 2  

\[ \begin{array}{c}
17000 \\
- 4000 \\
13000 \\
13000 \times 1.13 = 14690
\end{array} \]

Mark: 1 out of 2  
Rationale: Correct pre-tax value (1 mark)  
Incorrect final answer
Describe 2 advantages of leasing a car rather than financing the purchase of a similar new car.

Place one response per line.

1. 

2. 

Sample answers:

− lower monthly payment
− rarely have to pay for the long-term maintenance costs on car (brakes, timing belt, suspension)
− leasing allows for a more convenient car replacement
− pay tax on monthly payments not on the full price of the vehicle

(2 x 1 mark)
Exemplar 1

1. You get a new car in a while

2. You don’t do maintenance on it

Mark: 0 out of 2
Rationale: Incorrect responses

Exemplar 2

1. You may not have the money to purchase a car

2. Sometimes it’s cheaper than buying a car

Mark: 0 out of 2
Rationale: Incorrect responses

Exemplar 3

1. Warranty

2. Cheaper monthly payments

Mark: 1 out of 2
Rationale: Correct response (cheaper monthly payments) (1 mark)
Jean is financing the purchase of a new vehicle. She has saved money for the down payment. The table below shows the details of the purchase.

<table>
<thead>
<tr>
<th>Price of new vehicle</th>
<th>$26 000</th>
</tr>
</thead>
<tbody>
<tr>
<td>Trade-in value of current vehicle</td>
<td>$2000</td>
</tr>
<tr>
<td>Tax</td>
<td>$3120</td>
</tr>
<tr>
<td>Down payment</td>
<td>$3000</td>
</tr>
<tr>
<td>Monthly payment</td>
<td>$544.39</td>
</tr>
<tr>
<td>Term</td>
<td>48 months</td>
</tr>
</tbody>
</table>

A) Calculate the total amount borrowed. (1 mark)

**Answer:**

Amount borrowed: $26 000 – $2000 + $3120 – $3000

= $24 120 ← 1 mark

B) Calculate the total monthly payments paid over the term of the loan. (1 mark)

**Answer:**

Total monthly payments: $544.39 × 48

= $26 130.72 ← 1 mark

C) Calculate the finance charge (interest). (1 mark)

**Answer:**

Finance charge: $26 130.72 – $24 120

= $2010.72 ← 1 mark
Exemplar 1

(3 marks)

A) \(26000 - 2000 = 24000\)

B)

C)

Mark: 0 out of 3
Rationale: Incorrect answer in Part A
No response in Parts B and C

Exemplar 2

(3 marks)

A) \(26000 - 3000 = \boxed{23000} \text{E}5\)

B) \((544.39)(48) = 26130.72\)

C) \(26130.72 - 23000 = \boxed{3130.72}\)

Mark: 2 out of 3
Rationale: Incorrect answer in Part A
Correct answer in Part B (1 mark)
E5 (does not include units in final answer)
Correct answer in Part C (follow-through error) (1 mark)
Hugo is going to lease a car. He will pay $384.20 per month, after taxes, for 36 months. He will make a down payment of $1500.

Calculate the total cost paid by Hugo at the end of the 36-month lease.

**Answer:**

Total monthly payments: $384.20 \times 36 \quad \leftarrow 1 \text{ mark for process}

\[ = $13\ 831.20 \]

Total cost: $13\ 831.20 + $1500

\[ = $15\ 331.20 \quad \leftarrow 1 \text{ mark} \]
Exemplar 1

Mark: 1 out of 2

José and Shurjeel went on a road trip and recorded the following information:

<table>
<thead>
<tr>
<th>Day</th>
<th>Distance Driven</th>
<th>Amount of Gas Used</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monday</td>
<td>1200 km</td>
<td>45 L</td>
<td>$49.50</td>
</tr>
<tr>
<td>Tuesday</td>
<td>800 km</td>
<td>38 L</td>
<td>$19.00</td>
</tr>
<tr>
<td>Wednesday</td>
<td>1400 km</td>
<td>47 L</td>
<td>$34.00</td>
</tr>
<tr>
<td>Total</td>
<td>3400 km</td>
<td>130 L</td>
<td>$102.50</td>
</tr>
</tbody>
</table>

A) Calculate the fuel economy for the trip in L/100 km. (1 mark)

Answer:

\[
FE = \frac{130 \text{ L}}{3400 \text{ km}} \times 100 = 3.82 \text{ L/100 km}
\]

B) Calculate the cost of gas per litre for the trip. (1 mark)

Answer:

Cost of gas: \[
\frac{$102.50}{130 \text{ L}} = $0.79/\text{L}
\]

← 1 mark
Exemplar 1

(2 marks)

A) \[
\frac{L}{\text{km}} \times 100
\]
\[
\frac{45}{1200} = 3.75 \text{ L per 100 km}
\]

B) \[
79c. a \: L = 102.50 \div 130 = 0.7846\$
\]
\[
= 0.79\$
\]

Correct answer in Part B (1 mark)
E5 (uses incorrect units of measure)

Exemplar 2

(2 marks)

A) \[
\frac{130L}{3900} \times 100 = 3.8 L/100 km
\]

B) \[
\frac{8103.50}{3} = \$34.17
\]

Mark: 1 out of 2
Rationale: Correct answer in Part A (1 mark)
E6 (does not express the answer to the appropriate number of decimal places)
Incorrect answer in Part B
Alise is taking her car in for servicing. She needs the oil changed and an air filter replaced. The cost of labour is $95 per hour. The following table shows the details of the servicing.

<table>
<thead>
<tr>
<th>Parts</th>
<th>Cost of Parts</th>
<th>Labour Hours Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oil and filters</td>
<td>$50</td>
<td>0.5</td>
</tr>
</tbody>
</table>

Calculate the total cost Alise will pay after taxes.

Answer:

Labour: 0.5 × $95 = $47.50 ← 1 mark for labour cost
Parts: $50.00
Subtotal: $97.50 ← 1 mark for subtotal

Total: $97.50 × 1.13
= $110.18 ← 1 mark

OR

Answer:

Labour: 0.5 × $95 = $47.50 ← 1 mark for labour cost

Taxes: $47.50 × 1.13 = $53.68
$50.00 × 1.13 = $56.50 ← 1 mark for tax calculations

Total: $53.68 + $56.50
= $110.18 ← 1 mark
**Exemplar 1**  
(3 marks)

\[
\begin{align*}
\$ 50 \\
\$ 5 \times 2 \\
\$ 47.5 \\
\$ 47.5 + \$ 7.5 \\
\hline
\$ 55
\end{align*}
\]

Mark: 1 out of 3  
**Rationale:** Correct labour cost (1 mark)  
Incorrect subtotal  
Incorrect final answer

**Exemplar 2**  
(3 marks)

\[
\begin{align*}
5 \times \$ 95 & = \$ 47.5 \\

E6 (rounds too soon)
Given the following diagram of a tower with supporting wires:

Identify which of the following is true.

A) \( \frac{\sin 8^\circ}{48} = \frac{\sin 65^\circ}{50.6} \)

B) \( \frac{\sin 8^\circ}{50.6} = \frac{\sin 65^\circ}{48} \)

C) \( 50.6^2 = 7.3^2 + 48^2 - \left[ (2)(7.3)(48) \cos 8^\circ \right] \)

D) \( 7.3^2 = 48^2 + 50.6^2 - \left[ (2)(48)(50.6) \cos 8^\circ \right] \)

Answer: D)
Margo is building a model airplane. The measure of $\angle BAC$ is $82^\circ$, $BD$ is 25.69 cm and $\angle ABD$ is $35^\circ$.

Calculate the length of the front edge of the wing $AB$.

**Answer:**

\[
\begin{align*}
\angle DAB &= \frac{82^\circ}{2} \\
&= 41^\circ \\

\angle BDA &= 180^\circ - 35^\circ - 41^\circ \\
&= 104^\circ &\quad \text{1 mark for calculation of third angle}
\end{align*}
\]

\[
\frac{b}{\sin B} = \frac{a}{\sin A} &\quad \text{1 mark for identification of sine law}
\]

\[
\begin{align*}
\text{front edge} &= \frac{25.69 \text{ cm}}{\sin 104^\circ} \\
&= \frac{25.69 \text{ cm} (\sin 104^\circ)}{\sin 41^\circ} &\quad \text{1 mark for process/substitution} \\
&= 37.99 \text{ cm} &\quad \text{1 mark}
\end{align*}
\]

**Note to marker:** Accept equivalent solutions.
**Exemplar 1**

\[
\cos 35^\circ = \frac{25.69}{x}
\]

\[
\cos 35^\circ \cdot x = \frac{25.69}{\cos 35^\circ}
\]

\[
x = 31.36 \text{ cm}
\]

**Mark: 0 out of 4**

Justify why the following statement is false.

“If a quadrilateral has one pair of parallel sides and one pair of congruent sides, then the quadrilateral must be a parallelogram.”

Sample Answers:

− This statement is false. A trapezoid has one pair of parallel sides and one pair of congruent sides but it is not a parallelogram.

− This statement is false because a parallelogram requires two sets of opposite, parallel, congruent sides.

− This statement is false. For it to be true, one pair of sides of the quadrilateral must be both congruent and parallel.

Precision Measurement

Question 29  E5.P.1  1 mark

Explain which of the following thermometers is more precise.

Thermometer A  Thermometer B

Answer:

Thermometer B is more precise because the smallest markings are 1°C while Thermometer A is only precise to 2°C.
Exemplar 1

B is more precise because it has more numbers.

Mark: 0 out of 1
Rationale: Incorrect response

Exemplar 2

Thermometer B is most precise because it has the closer units of measurement.

Mark: 0 out of 1
Rationale: Incorrect response

Exemplar 3

Thermometer B because it goes up bars
-8
-10
the other one goes only 2

Mark: 1 out of 1
Rationale: Correct response (1 mark)
Choose the letter that best completes the sentence below.

How close a measurement is to the true value refers to:

A) tolerance
B) accuracy
C) precision
D) uncertainty

Answer: B)
This page was intentionally left blank.
Jordana is having a ring made by a jeweller. Her ring is to weigh 4.86 grams.

Calculate the uncertainty of the weight of her ring.

Do not round your final answer.

Answer:

Uncertainty: $0.01 \div 2$

$= 0.005 \text{ g}$ ← 1 mark

\[
\begin{align*}
\text{max: } & 2.80_{+50}^{-50} \\
\text{min: } & 2.30_{+50}^{-50}
\end{align*}
\]

Mark: 1 out of 2  
Rationale: Correct nominal value (1 mark)  
Incorrect half tolerance
Marc must write an entrance exam to enter university. He must receive a minimum grade of 75% to be accepted.

Last year his mark was in the 70th percentile. He was not accepted. This year his mark is in the 80th percentile.

Justify why it cannot be determined if Marc will be accepted into university this year.

**Answer:**
It cannot be determined if Marc will be accepted this year since his grade on the exam is not indicated.
Exemplar 1
(1 mark)

Yes he will be accepted because he is in the 80th percentile.

Mark: 0 out of 1
Rationale: Incorrect response

Exemplar 2
(1 mark)

It depends on the other marks.

Mark: 0 out of 1
Rationale: Incorrect response

Exemplar 3
(1 mark)

It is not determined if Marc will get accepted because the amount of people that scored lower may be huge, and his mark didn't have to be that great.

Mark: 1 out of 1
Rationale: Correct response (1 mark)
Financial institutions use credit scores to decide whether people qualify for a loan.

Below is a list of credit scores for people applying for a bank loan.

620  655  706  722  722  
768  775  778  780  784  
784  800  803  816  824  
824  831  840  849  852  

Calculate the percentile rank for a credit score of 800.

Answer:

\[
PR = \frac{b}{n} \times 100
\]

\[
= \frac{11}{20} \times 100
\]

\[= 55\]

\[\therefore 55 \text{ or } 55\text{th or } PR_{55}\]

Note to marker: Follow-through mark is awarded only if the “b” or “n” is substituted correctly.
Exemplar 1

Mark: 1 out of 2
Rationale: Incorrect process/substitution
Correct final answer (follow-through error) (1 mark)

Exemplar 2

Mark: 1 out of 2
Rationale: Incorrect process/substitution
Correct final answer (follow-through error) (1 mark)

Exemplar 3

Mark: 2 out of 2
Rationale: Correct process/substitution (1 mark)
Correct final answer (1 mark)
Réjean entered one of his paintings in the provincial art show. The table below shows the points he received and the weight of each category.

<table>
<thead>
<tr>
<th>Category</th>
<th>Points Received (out of 100)</th>
<th>Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>Originality</td>
<td>92</td>
<td>35%</td>
</tr>
<tr>
<td>Design</td>
<td>87</td>
<td>40%</td>
</tr>
<tr>
<td>Colour</td>
<td>77</td>
<td>25%</td>
</tr>
</tbody>
</table>

Calculate the final score on Réjean’s painting using a weighted mean.

**Answer:**

Final score:

\[
\begin{align*}
0.35 \times 92 &= 32.20 \\
0.40 \times 87 &= 34.80 \quad \leftarrow \text{1 mark for process} \\
0.25 \times 77 &= 19.25 \\
\end{align*}
\]

\[86.25 \text{ points} \quad \leftarrow \text{1 mark}\]

**Note to marker:** “points” not required
**Exemplar 1**

(2 marks)

1. $9.2 \times 3.8 = 34.4$
2. $8.7 \times 4.0 = 34.8$
3. $7.7 \times 3.8 = \frac{19.18}{83.49}$

Mark: 1 out of 2  
Rationale: Correct process (1 mark)  
Incorrect final answer

**Exemplar 2**

(2 marks)

\[92 \times 35 + 87 \times 40 + 77 \times 85\]

\[\frac{86.85}{100} = 86.8 \text{\,E6}\]

\[\text{rounded} \, 86\%\]

Mark: 2 out of 2  
Rationale: Correct process (1 mark)  
Correct final answer (1 mark)  
E6 (does not express the answer to the appropriate number of decimal places)

**Exemplar 3**

(2 marks)

\[9.2 \times 3.5 = 32.2\]
\[8.7 \times 4.0 = 34.8\]
\[7.7 \times 2.5 = 19.3\]

\[
\begin{align*}
32.2 \\
34.8 \\
19.3 \\
\hline
86.5\% 
\end{align*}
\]

Mark: 2 out of 2  
Rationale: Correct process (1 mark)  
E6 (rounds too soon)  
Correct final answer (follow-through error) (1 mark)
A store sells shoes with sizes ranging from 7 to 12. The following table shows sales for the last month.

<table>
<thead>
<tr>
<th>Size</th>
<th>Quantity Sold</th>
</tr>
</thead>
<tbody>
<tr>
<td>7</td>
<td>5</td>
</tr>
<tr>
<td>8</td>
<td>20</td>
</tr>
<tr>
<td>9</td>
<td>25</td>
</tr>
<tr>
<td>10</td>
<td>43</td>
</tr>
<tr>
<td>11</td>
<td>5</td>
</tr>
<tr>
<td>12</td>
<td>2</td>
</tr>
</tbody>
</table>

Choose the letter that best completes the sentence below.

The measure of central tendency that represents the most popular shoe size is:

A) mean
B) median
C) mode
D) weighted mean

Answer: C)
This page was intentionally left blank.
Environment Canada recorded the following maximum daily temperatures for Thompson for one week in October 2016.

<table>
<thead>
<tr>
<th></th>
<th>Sunday</th>
<th>Monday</th>
<th>Tuesday</th>
<th>Wednesday</th>
<th>Thursday</th>
<th>Friday</th>
<th>Saturday</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.70°C</td>
<td>3.40°C</td>
<td>−5.90°C</td>
<td>0.10°C</td>
<td>1.80°C</td>
<td>7.10°C</td>
<td>2.60°C</td>
<td></td>
</tr>
</tbody>
</table>

A) Calculate the mean temperature for the week. (1 mark)

**Answer:**

Mean: \( \frac{10.8°C}{7} \)

\[ = 1.54°C \] ← 1 mark

B) Calculate the trimmed mean temperature for the same week by removing the highest and lowest temperatures. (1 mark)

**Answer:**

Trimmed mean: \( \frac{9.6°C}{5} \)

\[ = 1.92°C \] ← 1 mark
Exemplar 1  (2 marks)

A) \[
\begin{align*}
1.7 + 3.41 &+ 5.9 + 0.1 + 1.8 + 7.1 \quad &\text{\underline{=}} \quad 26.6
\end{align*}
\]

Mark: 0 out of 2
Rationale: Incorrect answer in Part A
Incorrect answer in Part B

Exemplar 2  (2 mark)

A) \[
\begin{align*}
2 &+ 0.1 + 1.7 + 12.6 + 24 + 7.1 \\
7
\end{align*}
\]

\[
11.7
\]

\[
\frac{11.7}{7} = 1.67 \quad \text{or} \quad 1.72
\]

Mark: 2 out of 2
Rationale: Correct answer in Part A (1 mark)
E3 (makes a transcription error)
Correct answer in Part B (1 mark)
Exemplar 3  

(2 marks)

A) \(1.5^\circ C\)  

B) \(1.92^\circ C\)

Mark: 2 out of 2  

Rationale: Correct answer in Part A (1 mark)  
E6 (does not express the answer to the appropriate number of decimal places)  
Correct answer in Part B (1 mark)
This page was intentionally left blank.
Sidi works as a sales clerk at Cycle Sports. During the first 12 days of the month, the store sold the following numbers of bikes:

<p>| | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>16</td>
<td>32</td>
<td>27</td>
<td>19</td>
</tr>
<tr>
<td>19</td>
<td>23</td>
<td>19</td>
<td>32</td>
</tr>
<tr>
<td>25</td>
<td>20</td>
<td>35</td>
<td>33</td>
</tr>
</tbody>
</table>

Calculate the median and the mode of this data.

Median: _________ bikes

Mode: _________ bikes

Answer:

Median: __24___ bikes ← 1 mark

Mode: __19___ bikes ← 1 mark
Exemplar 1

(2 marks)

Median: \( \frac{23+25}{2} \) bikes

Mode: 19, 32 bikes

Mark: 0 out of 2
Rationale: Incorrect median
Incorrect mode

Appendix B: Irregularities in Provincial Tests
A Guide for Local Marking

During the marking of provincial tests, irregularities are occasionally encountered in test booklets. The following list provides examples of irregularities for which an Irregular Test Booklet Report should be completed and sent to the department:

- completely different penmanship in the same test booklet
- incoherent work with correct answers
- notes from a teacher indicating how he or she has assisted a student during test administration
- student offering that he or she received assistance on a question from a teacher
- student submitting work on unauthorized paper
- evidence of cheating or plagiarism
- disturbing or offensive content
- no responses provided by the student (all “NR”) or only incorrect responses (“0”)

Student comments or responses indicating that the student may be at personal risk of being harmed or of harming others are personal safety issues. This type of student response requires an immediate and appropriate follow-up at the school level. In this case, please ensure the department is made aware that follow-up has taken place by completing an Irregular Test Booklet Report.

Except in the case of cheating or plagiarism where the result is a provincial test mark of 0%, it is the responsibility of the division or the school to determine how they will proceed with irregularities. Once an irregularity has been confirmed, the marker prepares an Irregular Test Booklet Report documenting the situation, the people contacted, and the follow-up. The original copy of this report is to be retained by the local jurisdiction and a copy is to be sent to the department along with the test materials.

Appendix C:
Communication Errors

Communication Errors

Communication errors are errors not conceptually related to the learning outcomes associated with the question. The following communication errors will result in a 0.5 mark deduction. Each error can only be deducted once per test and is tracked in a separate section on the Scoring Sheet.

The total mark deduction for communication errors for any student response is not to exceed the marks awarded for that response. For example, there would be no communication error deductions if no marks were awarded for a given response.

<table>
<thead>
<tr>
<th>E1 (Final Answer)</th>
</tr>
</thead>
<tbody>
<tr>
<td>• final answer not clearly indicated (e.g., 3/4 and 3:1 presented, but final answer not indicated)</td>
</tr>
<tr>
<td>• answer is presented in another part of the question</td>
</tr>
<tr>
<td>• too much information is presented in the answer and the information is numerically and conceptually correct (If contradictory information is provided, no mark is awarded.)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>E2 (Notation)</th>
</tr>
</thead>
<tbody>
<tr>
<td>• dimensions written in an alternative form than requested (e.g., write the tolerance in the form nominal value $\pm \frac{1}{2}$ tolerance and student gives maximum $+ \frac{0}{-} tolerance$)</td>
</tr>
<tr>
<td>• answer expressed in an alternative form than requested (e.g., express probability as a percentage and student gives a decimal form)</td>
</tr>
<tr>
<td>• incorrect application of percent symbol</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>E3 (Transcription/Transposition)</th>
</tr>
</thead>
<tbody>
<tr>
<td>• makes a transcription error (inaccurate transferring of information from one part of the page to another)</td>
</tr>
<tr>
<td>• makes a transposition error (changing order of digits)</td>
</tr>
</tbody>
</table>
