General Marking Instructions

**Please do not make any marks in the student test booklets.** If the booklets have marks in them, the marks will need to be removed by departmental staff prior to sample marking should the booklet be selected.

Please ensure that

- the booklet number and the number on the *Answer/Scoring Sheet* are identical
- **students and markers use only a pencil to complete the *Answer/Scoring Sheets***
  - the totals of each of the four parts are written at the bottom
  - each student’s final result is recorded, by booklet number, on the corresponding *Answer/Scoring Sheet*
  - the *Answer/Scoring Sheet* is complete
  - a photocopy has been made for school records

Once marking is completed, please forward the *Answer/Scoring Sheets* to Manitoba Education and Training in the envelope provided (for more information see the administration manual).

**Marking the Test Questions**

The test is composed of constructed response questions and selected response questions. Constructed response questions are worth 1 to 5 marks each, and selected response questions are worth 1 mark each. An answer key for the selected response questions can be found at the beginning of the section “Booklet 2 Questions.”

To receive full marks, a student’s response must be complete and correct. Where alternative answering methods are possible, the *Marking Guide* attempts to address the most common solutions. For general guidelines regarding the scoring of students’ responses, see Appendix A.

**Irregularities in Provincial Tests**

During the administration of provincial tests, supervising teachers may encounter irregularities. Markers may also encounter irregularities during local marking sessions. Appendix B provides examples of such irregularities as well as procedures to follow to report irregularities.

If an *Answer/Scoring Sheet* is marked with “0” and/or “NR” only (e.g., student was present but did not attempt any questions), please document this on the *Irregular Test Booklet Report*. 
**Assistance**

If, during marking, any marking issue arises that cannot be resolved locally, please call Manitoba Education and Training at the earliest opportunity to advise us of the situation and seek assistance if necessary.

You must contact the Assessment Consultant responsible for this project before making any modifications to the answer keys or scoring rubrics.

Communication Errors

The marks allocated to questions are primarily based on the concepts and procedures associated with the learning outcomes in the curriculum. For each question, shade in the circle on the Answer/Scoring Sheet that represents the marks given based on the concepts and procedures. A total of these marks will provide the preliminary mark.

Errors that are not related to concepts or procedures are called “Communication Errors” (see Appendix A) and will be tracked on the Answer/Scoring Sheet in a separate section. There is a ½ mark deduction for each type of communication error committed, regardless of the number of errors per type (i.e., committing a second error for any type will not further affect a student’s mark), with a maximum deduction of 5 marks from the total test mark.

When a given response includes multiple types of communication errors, deductions are indicated in the order in which the errors occur in the response. No communication errors are recorded for work that has not been awarded marks. The total deduction may not exceed the marks awarded.

The student’s final mark is determined by subtracting the communication errors from the preliminary mark.

Example: A student has a preliminary mark of 72. The student committed two E1 errors (½ mark deduction), four E7 errors (½ mark deduction), and one E8 error (½ mark deduction). Although seven communication errors were committed in total, there is a deduction of only 1½ marks.

Given $\theta = 40^\circ$,

a) convert $\theta$ to radians.

b) determine the coterminal angles of $\theta$ where $\theta \in \mathbb{R}$.

**Solution**

Peter invests $560 per month at an annual interest rate of 4.2%, compounded monthly. Determine how many monthly investments he will need to make to obtain at least $500 000. Express your answer as a whole number.

Use the formula:

\[
FV = \frac{R \left( (1 + i)^n - 1 \right)}{i}
\]

where \( FV \) = the future value
\( R \) = the investment amount each period
\( i = \frac{r}{12} \) = the annual interest rate
\( n \) = the number of compounding periods per year
\( n \) = the number of investments

**Solution**

\[
500\,000 = \frac{560 \left( (1 + \frac{0.042}{12})^n - 1 \right)}{\frac{0.042}{12}}
\]

\[
500\,000 = \frac{560 \left( (1 + 0.0035)^n - 1 \right)}{0.0035}
\]

\[
500\,000 = 160\,000 \left( 1.0035^n - 1 \right)
\]

\[
3.125 = 1.0035^n - 1
\]

\[
4.125 = 1.0035^n
\]

\[
\log 4.125 = \log 1.0035^n
\]

\[
\log 4.125 = n \log 1.0035
\]

\[
n = \frac{\log 4.125}{\log 1.0035}
\]

\[
n = 405.584
\]

\[
\therefore \ 406 \text{ monthly investments are needed.}
\]
500 000 = \frac{560 [(1 + 0.042)^n - 1]}{0.042}

21 000 = \frac{560 [(1 + 0.042)^n - 1]}{560}

37.5 = (1.042)^n - 1

38.5 = (1.042)^n

\frac{\log 38.5}{\log 1.042} = \frac{n \log 1.042}{\log 1.042}

n = 88.733

Given the function \( f(x) = \frac{2}{x} - 1 \), justify why \( f(f(2)) \) is undefined.

**Solution**

\[
f(2) = \frac{2}{2} - 1 = 1 - 1 = 0
\]

\( f(f(2)) = \frac{2}{0} - 1 \), which is undefined because the denominator cannot be zero.

1 mark for justification

1 mark
Exemplar 1

\[ f(x) = \frac{a}{x} - 1 \]
\[ f(x) = |x| - 1 \]
\[ f(x) = 0 \]

It's not defined because if you plug 2 into x, then it becomes 1 \( \left( \frac{2}{2} = 1 \right) \) and then you do 2 - 1 which is equal to 0, so not defined.

Question 43

Explain why the domain of $y = \log_2(x - 1)$ is $x > 1$.

**Solution**

The argument of a logarithmic function must be positive.  

1 mark
Exemplar 1

If it were to be 1 or less than one
you would get \((x-1)\) to be negative or zero.
Which would be impossible to have because
\(2^y = (x-1)\) and you couldn't get a negative when
you have an unknown exponent \(y\) over 2.

MARKING GUIDELINES

Errors that are conceptually related to the learning outcomes associated with the question will result in a 1 mark deduction.

Each time a student makes one of the following errors, a ½ mark deduction will apply.

- arithmetic error
- procedural error
- terminology error in explanation
- lack of clarity in explanation, description, or justification
- incorrect shape of graph (only when marks are not allocated for shape)

Communication Errors

The following errors, which are not conceptually related to the learning outcomes associated with the question, may result in a ½ mark deduction and will be tracked on the Answer/Scoring Sheet.

Pre-Calculus Mathematics: Marking Guide (January 2017)
IRREGULARITIES IN PROVINCIAL TESTS

A GUIDE FOR LOCAL MARKING

During the marking of provincial tests, irregularities are occasionally encountered in test booklets. The following list provides examples of irregularities for which an Irregular Test Booklet Report should be completed and sent to the department:

- completely different penmanship in the same test booklet
- incoherent work with correct answers
- notes from a teacher indicating how he or she has assisted a student during test administration
- student offering that he or she received assistance on a question from a teacher
- student submitting work on unauthorized paper
- evidence of cheating or plagiarism
- disturbing or offensive content
- no responses provided by the student (all “NR”) or only incorrect responses (“0”)

Student comments or responses indicating that the student may be at personal risk of being harmed or of harming others are personal safety issues. This type of student response requires an immediate and appropriate follow-up at the school level. In this case, please ensure the department is made aware that follow-up has taken place by completing an Irregular Test Booklet Report.

Except in the case of cheating or plagiarism where the result is a provincial test mark of 0%, it is the responsibility of the division or the school to determine how they will proceed with irregularities. Once an irregularity has been confirmed, the marker prepares an Irregular Test Booklet Report documenting the situation, the people contacted, and the follow-up. The original copy of this report is to be retained by the local jurisdiction and a copy is to be sent to the department along with the test materials.
