Please do not make any marks in the student test booklets. If the booklets have marks in them, the marks will need to be removed by departmental staff prior to sample marking should the booklet be selected.

Please ensure that
- the booklet number and the number on the Answer/Scoring Sheet are identical
- students and markers use only a pencil to complete the Answer/Scoring Sheets
  - the totals of each of the four parts are written at the bottom
  - each student’s final result is recorded, by booklet number, on the corresponding Answer/Scoring Sheet
  - the Answer/Scoring Sheet is complete
  - a photocopy has been made for school records

Once marking is completed, please forward the Answer/Scoring Sheets to Manitoba Education and Advanced Learning in the envelope provided (for more information see the administration manual).

Marking the Test Questions
The test is composed of constructed response questions and selected response questions. Constructed response questions are worth 1 to 5 marks each, and selected response questions are worth 1 mark each. An answer key for the selected response questions can be found at the beginning of the section “Booklet 2 Questions.”

To receive full marks, a student’s response must be complete and correct. Where alternative answering methods are possible, the Marking Guide attempts to address the most common solutions. For general guidelines regarding the scoring of students’ responses, see Appendix A.

Irregularities in Provincial Tests
During the administration of provincial tests, supervising teachers may encounter irregularities. Markers may also encounter irregularities during local marking sessions. Appendix B provides examples of such irregularities as well as procedures to follow to report irregularities.

If an Answer/Scoring Sheet is marked with “0” and/or “NR” only (e.g., student was present but did not attempt any questions), please document this on the Irregular Test Booklet Report.
Assistance

If, during marking, any marking issue arises that cannot be resolved locally, please call Manitoba Education and Advanced Learning at the earliest opportunity to advise us of the situation and seek assistance if necessary.

You must contact the Assessment Consultant responsible for this project before making any modifications to the answer keys or scoring rubrics.

Communication Errors

The marks allocated to questions are primarily based on the concepts and procedures associated with the learning outcomes in the curriculum. For each question, shade in the circle on the Answer/Scoring Sheet that represents the marks given based on the concepts and procedures. A total of these marks will provide the preliminary mark.

Errors that are not related to concepts or procedures are called “Communication Errors” (see Appendix A) and will be tracked on the Answer/Scoring Sheet in a separate section. There is a ½ mark deduction for each type of communication error committed, regardless of the number of errors per type (i.e., committing a second error for any type will not further affect a student’s mark), with a maximum deduction of 5 marks from the total test mark.

The total mark deduction for communication errors for any student response is not to exceed the marks given for that response. When multiple communication errors are made in a given response, any deductions are to be indicated in the order in which the errors occur in the response, without exceeding the given marks.

The student’s final mark is determined by subtracting the communication errors from the preliminary mark.

Example: A student has a preliminary mark of 72. The student committed two E1 errors (½ mark deduction), four E7 errors (½ mark deduction), and one E8 error (½ mark deduction). Although seven communication errors were committed in total, there is a deduction of only 1½ marks.

Example: Marks assigned to the student.

Question 1

Use the information in the diagram to determine the value of the arc length “s”, given the central angle of \(56^\circ\).

Solution

\[
\theta = 56^\circ \times \frac{\pi}{180^\circ}
\]

\[
\theta = \frac{56\pi}{180} \text{ or } \frac{14\pi}{45}
\]

\[
s = \theta r
\]

\[
s = \left(\frac{14\pi}{45}\right)(3\text{ m})
\]

\[
s = \frac{14\pi}{15}\text{ m or 2.932 m}

Question 3

R8, R10

Solve:

\[ 2^{5x} = 3(5)^{x-3} \]

Solution

\[
\log_{10} 2^{5x} = \log_{10} [3(5)^{x-3}]
\]

\[
5x \log_{10} 2 = \log_{10} 3 + (x - 3) \log_{10} 5
\]

\[
5x \log_{10} 2 = \log_{10} 3 + x \log_{10} 5 - 3 \log_{10} 5

David and Sarah are in a class of 10 boys and 8 girls.
A committee of 3 boys and 2 girls is to be selected from the students in this class.
Determine the number of possible committees if David and Sarah cannot be on the same committee.

Solution

Method 1
All: \( \binom{10}{3} \times \binom{8}{2} = 3360 \)  
1 mark for all possible committees
Both: \( \binom{9}{2} \times \binom{7}{1} = 252 \)  
1 mark for both on the committee

A lake affected by acid rain has a pH of 4.4.  
A person suffering from heartburn has a stomach acid pH of 1.2.  
The pH of a solution is defined as $\text{pH} = -\log[H^+]$ where $[H^+]$ is the hydrogen ion concentration.  
How many times greater is the hydrogen ion concentration of the stomach than that of the lake?  
Express your answer as a whole number.

**Solution**

**Method 1**

\[
\begin{align*}
\text{pH} &= -\log[H^+] \\
-\text{pH} &= \log[H^+] \\
[H^+] &= 10^{-\text{pH}} \\
\frac{[H^+]}{[H^+]}_{\text{stomach}} &= \frac{10^{-1.2}}{10^{-4.4}} \\

Explain how the value of $n$ affects the behaviour of the graph of the polynomial function $p(x) = (x + 3)(x - 1)^n$, as $p(x)$ approaches the $x$-intercept at $x = 1$.

Solution

If $n$ is even, the graph will turn at the $x$-axis at $x = 1$.
If $n$ is odd, the graph will cross the $x$-axis at $x = 1$.

or

As $n$ increases, $p(x)$ will become flatter around the intercept at $x = 1$.

Reflect the graph over the $y$-axis.
Exemplar 1

Since the $x$ is now negative, it would be a flip over the x-axis. So, you would flip below the x-axis line, so any positive numbers become negative.

Explain how the graph of \( y = \frac{3(x - 1)}{(x - 1)} \) is different than the graph of \( y = 3 \).

**Solution**

There is a point of discontinuity (hole) when \( x = 1 \) on the graph of \( y = \frac{3(x - 1)}{(x - 1)} \). 1 mark
Exemplar 1

The graph of \( \frac{3(x-1)}{(x-1)} \) will have non permissible values, as you cannot divide by zero, while the graph of \( y = 3 \) does not have any non permissible values.

Exemplar 2

It is not different. \( y = 3 \) is the same as \( y = \frac{3(x-1)}{(x-1)} \) because the \((x-1)\) cancels itself.

\[
y = 3 \\
y = \frac{3(x-1)}{(x-1)} \\
y = \frac{3}{1} \quad y = 3

The height of a bicycle pedal as the bicycle is moving at a constant speed can be represented by the following function:

\[ h(t) = 15 \cos \frac{2\pi}{5} t + 30 \]

where \( h \) is the height of the pedal above the ground, in cm, and \( t \) is the time, in seconds.

a) Sketch a graph of at least one period of this function, where \( t \geq 0 \).

b) Determine the height of the bicycle pedal at 7.5 seconds.

**Solution**

a)  

\[ \text{Amplitude} = 15 \quad 1 \text{ mark for amplitude} \]

Explain why $\binom{3}{8}$ is undefined.

**Solution**

In the formula $\binom{n}{r}$, the number of objects, $n$, must be larger than or equal to the number of objects selected, $r$.

Question 38

Solve:

\[ nP_3 = 48(n-1) \]

Solution

\[
\frac{n!}{(n-3)!} = 48(n-1)
\]

\[
\frac{(n)(n-1)(n-2)(n-3)!}{(n-3)!} = 48(n-1)
\]

\[ n(n-2) = 48 \]

\[ n^2 - 2n - 48 = 0 \]

\[ (n-8)(n+6) = 0 \]

\[ n = 8 \quad n = -6 \]

Christine dives off a diving board. Her dive is modelled by the function $h(t) = t^3 - 3t^2 - t + 3$, where $h$ is her height in metres, relative to the water surface and $t$ is the time in seconds after diving off the diving board.

a) Given that $(t + 1)$ is a factor for the function $h(t)$, determine the other factors.

b) Sketch the graph of the function $h(t)$ for the time interval $t = 0$ to $t = 3$.

c) Determine how many seconds Christine is underwater.

**MARKING GUIDELINES**

Errors that are conceptually related to the learning outcomes associated with the question will result in a 1 mark deduction.

Each time a student makes one of the following errors, a ½ mark deduction will apply.

- arithmetic error
- procedural error
- terminology error in explanation
- lack of clarity in explanation
- incorrect shape of graph (only when marks are not allocated for shape)

**Communication Errors**

The following errors, which are not conceptually related to the learning outcomes associated with the question, may result in a ½ mark deduction and will be tracked on the Answer/Scoring Sheet.

IRREGULARITIES IN PROVINCIAL TESTS

A GUIDE FOR LOCAL MARKING

During the marking of provincial tests, irregularities are occasionally encountered in test booklets. The following list provides examples of irregularities for which an Irregular Test Booklet Report should be completed and sent to the department:

- completely different penmanship in the same test booklet
- incoherent work with correct answers
- notes from a teacher indicating how he or she has assisted a student during test administration
- student offering that he or she received assistance on a question from a teacher
- student submitting work on unauthorized paper
- evidence of cheating or plagiarism
- disturbing or offensive content
- no responses provided by the student (all “NR”) or only incorrect responses (“0”)

Student comments or responses indicating that the student may be at personal risk of being harmed or of harming others are personal safety issues. This type of student response requires an immediate and appropriate follow-up at the school level. In this case, please ensure the department is made aware that follow-up has taken place by completing an Irregular Test Booklet Report.

Except in the case of cheating or plagiarism where the result is a provincial test mark of 0%, it is the responsibility of the division or the school to determine how they will proceed with irregularities. Once an irregularity has been confirmed, the marker prepares an Irregular Test Booklet Report documenting the situation, the people contacted, and the follow-up. The original copy of this report is to be retained by the local jurisdiction and a copy is to be sent to the department along with the test materials.
