General Marking Instructions

Please do not make any marks in the student test booklets. If the booklets have marks in them, the marks will need to be removed by departmental staff prior to sample marking should the booklet be selected.

Please ensure that

- the booklet number and the number on the Answer/Scoring Sheet are identical
- students and markers use only a pencil to complete the Answer/Scoring Sheets
- the totals of each of the four parts are written at the bottom
- each student’s final result is recorded, by booklet number, on the corresponding Answer/Scoring Sheet
- the Answer/Scoring Sheet is complete
- a photocopy has been made for school records

Once marking is completed, please forward the Answer/Scoring Sheets to Manitoba Education and Training in the envelope provided (for more information see the administration manual).

Marking the Test Questions

The test is composed of constructed response questions and selected response questions. Constructed response questions are worth 1 to 5 marks each, and selected response questions are worth 1 mark each. An answer key for the selected response questions can be found at the beginning of the section “Booklet 2 Questions.”

To receive full marks, a student’s response must be complete and correct. Where alternative answering methods are possible, the Marking Guide attempts to address the most common solutions. For general guidelines regarding the scoring of students’ responses, see Appendix A.

Irregularities in Provincial Tests

During the administration of provincial tests, supervising teachers may encounter irregularities. Markers may also encounter irregularities during local marking sessions. Appendix B provides examples of such irregularities as well as procedures to follow to report irregularities.

If an Answer/Scoring Sheet is marked with “0” only (e.g., student was present but did not attempt any questions), please document this on the Irregular Test Booklet Report.
**Assistance**

If, during marking, any marking issue arises that cannot be resolved locally, please call Manitoba Education and Training at the earliest opportunity to advise us of the situation and seek assistance if necessary.

You must contact the Assessment Consultant responsible for this project before making any modifications to the answer keys or scoring rubrics.

**Communication Errors**

The marks allocated to questions are primarily based on the concepts and procedures associated with the learning outcomes in the curriculum. For each question, shade in the circle on the Answer/Scoring Sheet that represents the marks given based on the concepts and procedures. A total of these marks will provide the preliminary mark.

Errors that are not related to concepts or procedures are called “Communication Errors” (see Appendix A) and will be tracked on the Answer/Scoring Sheet in a separate section. There is a ½ mark deduction for each type of communication error committed, regardless of the number of errors per type (i.e., committing a second error for any type will not further affect a student’s mark), with a maximum deduction of 5 marks from the total test mark.

When a given response includes multiple types of communication errors, deductions are indicated in the order in which the errors occur in the response. No communication errors are recorded for work that has not been awarded marks. The total deduction may not exceed the marks awarded.

The student’s final mark is determined by subtracting the communication errors from the preliminary mark.

Example: A student has a preliminary mark of 72. The student committed two E1 errors (½ mark deduction), four E7 errors (½ mark deduction), and one E8 error (½ mark deduction). Although seven communication errors were committed in total, there is a deduction of only 1½ marks.

Avery has 4 adventure books, 5 mystery books, and 1 comic book.

Determine the number of ways he can arrange all of the books on his shelf if each type of book must be grouped together.

Solution

\[
\begin{align*}
\frac{3!}{\text{types of books}} \cdot \frac{4!}{\text{adventure books}} \cdot \frac{5!}{\text{mystery books}} \cdot \frac{1!}{\text{comic book}} &= 17280 \text{ ways} \\

A series of blood tests measures the concentration of a prescribed drug. This concentration decreases according to the formula $A = Pe^{rt}$ where:

- $A$ is the concentration at time $t$
- $P$ is the initial concentration
- $r$ is the rate of change
- $t$ is the time, in hours, after the first blood test

The initial concentration is 3.8900 units/mL. Three hours later, the concentration is 1.7505 units/mL.

a) Determine the rate of change, $r$, algebraically.

b) Determine the concentration of the prescribed drug four hours after the initial concentration of 3.8900 units/mL was measured. Express the answer correct to 4 decimal places.

**Solution**

a) 

$1.7505 = 3.8900e^{r(3)}$  

$0.45 = e^{3r}$

$\ln0.45 = 3r\ln e$

Ariane uses the formula $s = \theta r$ to determine the arc length of a circle that has a central angle of $20^\circ$ and a radius of 15 cm.

Below is Ariane’s work:

\[
\begin{align*}
  s &= \theta r \\
  s &= (20)(15) \\
  s &= 300 \text{ cm}

Question 8

Explain why the value of $n$ must be greater than or equal to the value of $r$, when using $\binom{n}{r}$.

**Solution**

The number of objects to select, $r$, cannot be greater than the total number of objects, $n$.

Question 18  R3

The range of \( y = f(x) \) is \(-6 \leq y \leq 12\). The range of the transformed function \( y = af(x) \) is \(-2 \leq y \leq 4\). Identify the value of \( a \).

a) \(-3\)

b) \(-\frac{1}{3}\)

c) \(\frac{1}{3}\)

d) 3

Question 19  R8

Identify the expression which is equivalent to \( 3 \log y - \frac{1}{2} \log x + \log z \).

a) \( \log \left( \frac{y^3}{\sqrt{xz}} \right) \)

b) \( \log \left( \frac{y^3 z}{\sqrt{x}} \right) \)

c) \( \log \left( \frac{y^3}{x^2 z} \right) \)

d) \( \log \left( \frac{y^3 z}{x^2} \right) \)

Question 20  T1

Question 28

Justify that \((x - 5)\) is not a possible factor of the function \(P(x) = x^3 - 3x^2 - 4x + 12\).

**Solution**

When \(x = 5\) is substituted into \(P(x)\), \(P(5)\) does not equal 0.

1 mark
Exemplar 1

\[ P(5) = (5)^3 - 3(5)^2 - 4(5) + 12 \]
\[ = 125 - 75 - 20 + 12 \]

Given the function $f(x) = \sqrt{x}$, describe how to use transformations to determine the domain of the function $g(x) = f(x + 2) + 1$.

**Solution**

The graph of $g(x)$ is a horizontal translation 2 units to the left of the graph of $f(x)$, which changes the domain from $x \geq 0$ to $x \geq -2$. 

[1 mark]
Exemplar 1

- move the points to the left two units.
- move the points up one unit.

**MARKING GUIDELINES**

Errors that are conceptually related to the learning outcomes associated with the question will result in a 1 mark deduction.

Each time a student makes one of the following errors, a ½ mark deduction will apply.

- arithmetic error
- procedural error
- terminology error in explanation
- lack of clarity in explanation, description, or justification
- incorrect shape of graph (only when marks are not allocated for shape)

### Communication Errors

The following errors, which are not conceptually related to the learning outcomes associated with the question, may result in a ½ mark deduction and will be tracked on the **Answer/Scoring Sheet**.

IRREGULARITIES IN PROVINCIAL TESTS

A GUIDE FOR LOCAL MARKING

During the marking of provincial tests, irregularities are occasionally encountered in test booklets. The following list provides examples of irregularities for which an Irregular Test Booklet Report should be completed and sent to the department:

- completely different penmanship in the same test booklet
- incoherent work with correct answers
- notes from a teacher indicating how he or she has assisted a student during test administration
- student offering that he or she received assistance on a question from a teacher
- student submitting work on unauthorized paper
- evidence of cheating or plagiarism
- disturbing or offensive content
- no responses provided by the student or only incorrect responses ("0")

Student comments or responses indicating that the student may be at personal risk of being harmed or of harming others are personal safety issues. This type of student response requires an immediate and appropriate follow-up at the school level. In this case, please ensure the department is made aware that follow-up has taken place by completing an Irregular Test Booklet Report.

Except in the case of cheating or plagiarism where the result is a provincial test mark of 0%, it is the responsibility of the division or the school to determine how they will proceed with irregularities. Once an irregularity has been confirmed, the marker prepares an Irregular Test Booklet Report documenting the situation, the people contacted, and the follow-up. The original copy of this report is to be retained by the local jurisdiction and a copy is to be sent to the department along with the test materials.
