10 Questions About Cannabis Use And Your Teen

1. WHAT IS CANNABIS?

Cannabis is a drug that can be produced from plants. The plant contains many chemicals, including two main active ingredients:

- **THC** affects the brain and produces the high. Over the years, levels of THC in cannabis have risen significantly which can lead to harmful effects.
- **CBD** is currently being studied to determine possible medical benefits.

Synthetic cannabinoids (created in a lab) are chemicals that are sprayed onto dried plant material. Synthetic cannabinoids can be more dangerous than cannabis.

There is no “safe” amount of cannabis. Effects vary depending on type, amount, potency and duration of use. Past products were usually low potency (less than 5% THC). Today’s products are more dangerous (30-90% THC).

2. WHAT DOES IT LOOK LIKE?

- **Cannabis**: almost like tea or dried leaves; usually green or brown.
- **Hashish**: made from the plant resin; solid or paste; usually brown or black.
- **A concentrate (aka oil/wax/dabs/shatter)**: made from the plant; oily, waxy or pasty; usually yellow or brown.

3. WHAT DO PEOPLE CALL IT?

Pot, weed, chronic, bud, herb, kush, joint, loud, mary jane, mj, blunt, dab, dope, ganja, grass, hash, reefer, skunk, smoke, trees, wax.

Synthetic cannabinoids can be called: spice, K2, Cloud 9, mojo.

4. HOW IS IT USED?

- **Inhaled**: Rolled into a joint (cigarette) or blunt (cigar) and smoked; through a bong (water pipe); or in a vaporizer (vape). Effects are immediate and last for hours.
- **Eaten**: Usually added to cookies, muffins, lollipops, gummy candy and brownies (aka edibles). Cannabis tea is also an edible. Effects are delayed by hours and can last up to 12 hours. This can result in teens eating too much and overdosing or experiencing adverse effects.

Symptoms of an overdose or “greening out” include: vomiting, psychosis and panic.

5. WHO USES IT AND WHY?

After alcohol, cannabis is the most common drug used by Canadian teens. People may use cannabis to:

- get high
- fit in/be social
- try something new
- escape from routine
- have fun and relax
- cope or focus

Using cannabis to cope is not a healthy strategy. Suggest that your teen use other techniques including: music, reading, sports, hobbies, volunteering or hanging out with friends.

6. WHAT ABOUT THE TEEN BRAIN?

Adolescent years are a crucial period for brain growth and development. Regular cannabis use can have a negative impact on how a teen’s brain grows and develops.

WHAT ARE THE EFFECTS & SIGNS OF CANNABIS USE?

Misinformation about cannabis is common. A recent national survey reports that about 70% of grade 12 students did not think regular cannabis use was harmful. The truth is that regular cannabis use can be harmful.

**Short-term effects:**
- feeling relaxed, happy, high
- more sociable
- heightened & distorted perceptions
- decreased motor coordination
- impaired judgement & problem solving
- impaired memory & learning capability
- increased heart rate & body tremors
- anxiety or panic*
- psychotic symptoms*
- nausea & vomiting*

*Note: Using cannabis together with other drugs/alcohol can increase negative effects.

**Long-term effects:**
- impaired cognitive function (attention, memory & problem solving)
- lack of motivation
- school drop-out/poor academic achievement
- chronic bronchitis
- increased risk for Anxiety Disorders, Mood Disorders, Psychotic Disorders & Cannabis Use Disorder (addiction)

Negative long-term effects are more common when use begins before age 16, and when cannabis use is daily.

**WHAT SHOULD I DO IN AN EMERGENCY? (SJSS)**

If a young person has overdosed on cannabis (i.e. “greened out”), follow these steps:

- **S** bring them to a safe place
- **J** if they aren’t vomiting, give them lots of fruit juice
- **S** if they’ve passed out, lie them on their side and call 911
- **S** if they’re panicky or paranoid, stay with them to provide reassurance and support

Other steps:
- If you’re uncomfortable with what’s happening, or suspect synthetic cannabinoid use, call 911
- Afterwards, have a frank, open and non-threatening discussion about your child’s cannabis use
- If it isn’t your child, decide if and when to discuss the situation with their caregivers

**HOW DO I TALK ABOUT CANNABIS USE?**

There’s a lot of misinformation about cannabis. Get informed, know the facts and TALK SMART. When speaking with your teen about cannabis: be open but not permissive; listen actively and respectfully; provide evidence-based information; help them choose healthy life options.

Help your teen understand:
- If they don’t want to use drugs, they are their own person and it’s their decision not to, even if their friends are.
- They’re encouraged to educate themselves about cannabis to have evidence-based information

Keep in mind:
- Parents are role models for their children
- Your own substance use and attitudes towards cannabis use will influence your child
- Speak openly and clearly with your teen about cannabis use
- Don’t wait until they start using the drug
- You are their parent – not a peer
